ATM Room Protection Embassy Security Rooms

ATM Rooms

- ATM Rooms & Enclosures
Designed to our Clients Specification
- High Security Doors
- Access Control Options
- Embassy Walling Design
- Fire and Ballistic Protection Available
- Built in ATM Anchoring Options
- Low Voltage Lighting
- Delivered and Installed by our
Expert Engineering Team
- Market Leading 2 Year Warranty

Gas Attack Protection GP-X

Benefits of GP-X

- Fastest Gas Detection Available
- Instant Alarm Activation
- Explosion Protection
- Fire Protection
- Indefinite Gas Attack Protection
- MOD Tested
- Approved by UK Banks
- Approved by ATM Manufacturers
- Proven under Attack
- Award winning ATM Safe System
- Quick Return on Investment

Low Cost
Maximum Protection
Fast Return On Investment

Safe Door Protection Pluslocks

- Re-locker mechanisms built into high security vault doors and safes have been used for centuries, they are intended to keep the door locked during a burglary attempt.
- Upgrade low level ATM Safes to a higher level of protection.
- At the heart of our re-locker system is our Live Pluslock which adds an additional live locking position within the safe that is operated when closing the Cencon lock.
- We have installed 1000's of Pluslocks saving the industry millions of pounds over the years.

Every additional Pluslock installed, adds a higher level of protection

Pull Out & Cutting Protection ACW's, ACP & E-Frame

ACW's

The ACW's have been designed to add an additional 60+ kg of weight each to the ATM. This helps especially in locations the ATMs cannot be bolted down or have poor fixings.

The Cencon ACP

The Cencon ACP has been designed as a fast deploy deterrent (no safe access required) and protection against the cutting and drill attacks below the Cencon lock.

The E-FRAME

The E-FRAME upgrade protects against many of the recent attacks by adding a 60mm steel and composite armoured barrier in key locations of the safe door.

🚧 Ram Raid Protection Strongarm HD

Strongarm Anchor

Solution for all ATM's

Innovative fabricated internal locking system housed within an impact resistant mounting block, installed with low centre of gravity fixings.

Strongarm Plinth

Solution for TTW ATM's

The STRONGARM Anchor Plinth is a heavy duty easy level adjustable plinth designed for ease of installation and adjustment.

Strongarm Subterra

The Subterra Strongarm anchoring system has been tested with our clients in attendance. We employed a professional rescue team to try and lift the ATM out of the ground.

🚪 Door Pull Protection ADPS

Wincor 1500 Solution

The ADPS for the Wincor 1500 ATM is installed behind the safe door as a fixed device with a locking drop in component within the ATM hood.

- Heavy duty steel fabricated internal boss system with built in vertical re-locker
- External drop in locking bolts assembly locked in place using the ATM keys
- Protects the key area where the hook is installed by reducing the forces to the safe door bolt works
- Operated by unlocking the ADPS system top mounting plate by accessing the ATM hood
- The ADPS is unlocked using the same ATM key

🚧 Pull Out & Cutting Protection HALO

The HALO is designed to add complete protection and attack time delay for all internal ATM's

The HALO system is the crown jewels' when it comes to protecting internal lobby ATM's. During the design and production of the system we looked at ATM crime data, met with ATM security managers and also large retailers John Lewis, The Co-operative Group, Tesco, Asda, Morrisons and Aldi to name a few.

🚪 Dispenser & Cash Trapping Protection

DACP, Dispenser & ATM Blocker

DACP – Dispenser Anti cut plate

The DACP is a steel fabrication welded and filled with our own attack resistant chemical composite mix, steel filings and re-bar that is bolted from the inside of the ATM to make a secure tamper proof fixing.

ATM Blocker

We were approached by a US ATM deployer to design a cost effective solution that could be deployed quickly to protect ATM's from cash trapping and transaction reversal fraud attacks.

Dispenser Upgrade

Dual skin dispenser upgrade developed for the NCR 5877 POD ATM to stop easy access and crow bar attacks into the purge and top cassettes. Welded onto the safe door in the workshop. Our engineers upgrade this on a door rotation system to reduce ATM down time.

OTC Smart CIT Lock Sentinel

Sentinel – Custodia

The Custodia is a smart ready high security safe lock and key pad providing one-time code CIT function via QR code. The Sentinel keypad is an elegant and flat design with the option of an inclined keypad variant with battery compartment. All Sentinel locks are VdS and ECB•S approved with the class B lock also having A2P Certified protection against burglary. The perfect upgrade for all ATM estates.

The options are endless – Please ask us for our expert consultation

Sentinel – Oculus

The Oculus has all the features of the Sentinel Custodia but takes the lock options to new levels by communicating with our PC software for configuration and administration of the lock system or via the TwinIP extension unit for integrating the lock system into the customer network for full monitoring of the ATM safe lock.

Sentinel – Imperium

The Imperium has all the available features of the Custodia and the Oculus with the additional control via our total lock control PC software to provide full access control and management of entry doors, security doors, access control, key access and the ATM safe locks.

Case Study

Burton Security were invited to participate in a tender process for the implementation of a new ATM electronic safe locking solution. After successfully exceeding the tender requirements, we were awarded the opportunity to undertake this rollout across the client's UK network of ATM's.

The project included the supply, installation and project management of circa 1,400 ATM Safe locks across a network of 650+ branches. Working closely with the client we designed a bespoke installation process and timetable suitable for the wide variety of ATM models and operational needs of the business. Throughout the project planning several client specific functionality requests were explored, developed, tested and implemented to ensure client satisfaction beyond the original scope.

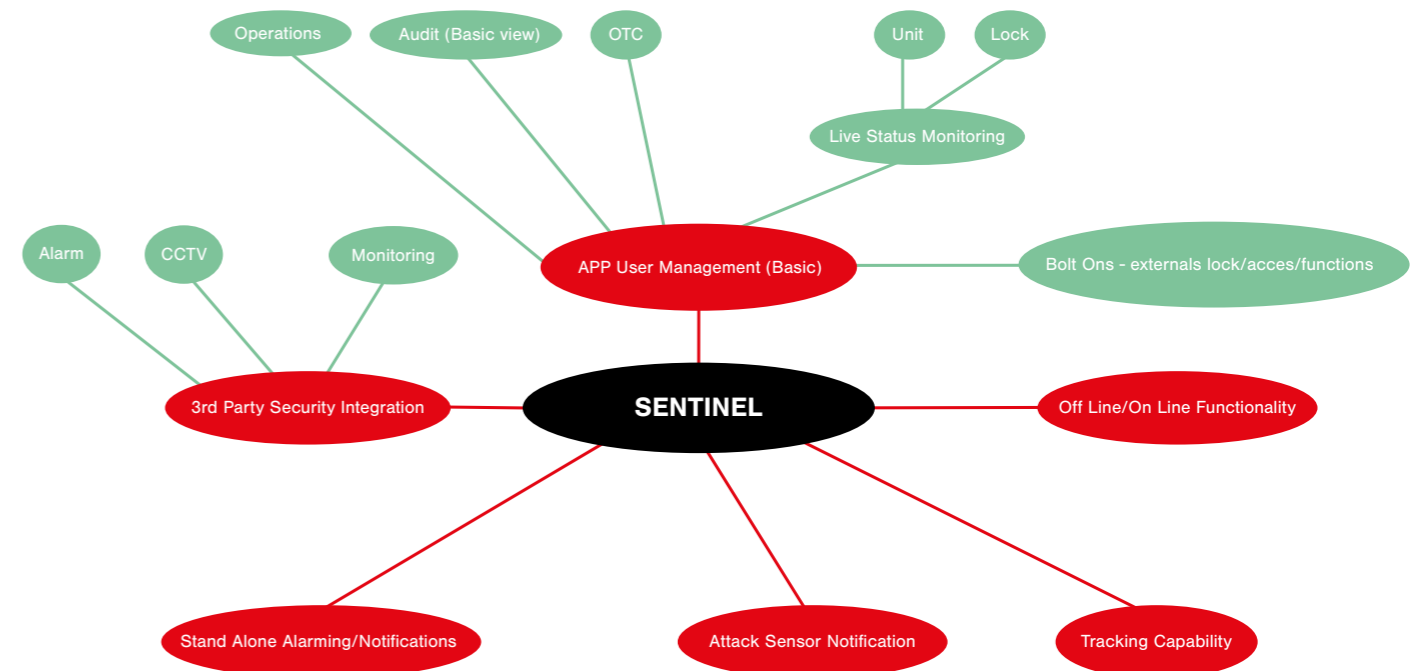

After the planning period was completed the physical installations began. Using our network of skilled and qualified safe engineers we successfully installed to each ATM, in both a live branch and factory environment.

Throughout the entire project, regular reviews were undertaken, and actions applied to ensure an efficient and cost-effective rollout. As a result of the detailed pre planning work and an efficient installation process, the project was successfully completed within the client's requested timeframe of 26 weeks, allowing them to reap the benefits of the developed solution as early as possible;

- Freed up branch colleague time, removing involvement in the ATM replenishment process
- Improved security and efficiencies in the management of staff access to the Locks
- Removal of mastercodes management and responsibility - passed to Burton Safes
- Enabling efficient estate wide changes with the use of configuration cards
- Implementation of One Time Code (OTC) functionality without the need for additional infrastructure or IT Involvement including:

- Auto generation of secure OTC for CIT Access
- Real Time lock status monitoring as part of the OTC functionality

DELIVERY AND INSTALLATION SERVICES

ATM RECOVERIES

We offer a 7 day emergency recovery service for our clients in the UK when an ATM has suffered an attack. Our specialist engineers can open safe doors, remove the ATM to our secure storage and make site safe to the public.

ASSET RECOVERY

As part of our recovery team we often meet CIT teams, the Police and open safes so the assets can be recovered urgently and removed from further risk of theft.

SAFE REPAIRS AND UPGRADES

We can repair most ATM's after an physical attack in our workshops. Damaged safe doors and safe bodies can be welded and repaired by our fabrication team, while also being upgraded with ATM SAFE security products, Smaller damage can be repaired and protected on site after criminal activity.

INSTALLATIONS, REMOVALS AND MOVES

ATM SAFE have been providing Installation, Moves & Changes (IMAC services) to ATM companies and the financial sector for many years. Our dedicated project managers ensure we offer the highest level of customer attention and service.

SAFE LOCK SUPPLY AND INSTALLATIONS

As an approved distributor of Kaba, LA Gard and INSYS safe locks we can deliver an exceptional design, supply and installation service using our own qualified field safe engineering team.

SERVICING

Our dedicated ATM service desk ensures all works are professionally carried out by using our own security engineers for all service works, lock fits and security product installations.
