IF IT MATTERS TO YOU, SECURE IT WITH US...

Burton Safes are the trusted safe and vault supplier. With a high-quality product range of over 100 tested and certified fire and security safes we have been serving the Locksmith and business world for over 30 years.

We have a range of solutions for securing keys for the home, healthcare, garages, banks, hospitals, and business users which includes a range of Police preferred solutions, larger key storage solutions, remote critical access, and intelligent key management systems.

THE SURE DEFENCE

The Sure Defence Team provide a fully managed and personal high security service to protect your home or business. From initial sales advice, to survey, CAD drawings, supply, and installation we are one of the few UK companies providing the full design and engineering services in house.

Our award-winning ATM and Banking physical security systems and services are used by ATM manufacturers, financial institutions, independent ATM deployers and banks across the world. We offer protection systems for all known physical ATM attacks.

With our Design & Innovation engineering centre we are able to manufacture our own customised physical security products. We employ highly skilled, fully trained, and vetted safe & vault engineers to provide our customers with safe opening, repairs and installation services.

Safes and Secure Storage

Our comprehensive range of Home Safes and Domestic Security Solutions.

Burton Safes is extremely proud of how far we have come as a business. Our founder Norman Berry started selling a few safes from his garage in Kirkburton in 1990 to churches and the Locksmith trade.

30 years later we are now the UK's leading safe and vault provider and security company providing a large selection of physical security solutions to the trade, commercial and banking customers across the UK and around the world.

Burton Safes core principle is to ensure products are tested to the highest standards. We are proud to have tested products to LPCB standards and feature in RedBookLive.

Our SURE DEFENCE team are qualified in security design and consultancy. Dedicated account and project managers ensure an unrivalled customer experience.

We have created world-class and award-winning security products and services that keep you safe now and into the future.

WARRANTY Up to 5 Years

All our safes come with a one, three or our industry leading five year warranty as standard.

Home Safes and Security Range

Professional Safes and Security Range

Premium Safes and Security Range

SAFE LOCK Standards

EN1300 - This is a standard for safe locks. The locks are subjected to various durability and manipulation tests and given one of four grades from A - D.

All safes and strongrooms certified to EN14450 and EN1143-1/2 must have a certified lock that reflects the grade of the safe

- **EN14450** and EN1143-1/2 Grade 0-II must have 1 lock certified to Class A
- **EN1143-1/2** Grade III must have 1 lock certified to Class B
- **EN1143-1/2** Grade IV and V must have 2 locks certified to Class B
- **EN1143-1/2** Grade VI to X must have 2 locks certified to Class C

SAFE Standards

Every safe and vault which is certified to EN 14450, EN 1143-1 & EN 1143-2 should have a certification plate on the back of the door. This gives you important information about the product and its security rating.

EN14450 - This is a burglary attack test standard for safe cabinets. It largely covers smaller, home safes and cabinets for commercial applications. Safes are attacked using a set list of tools, and scores are given depending on the time taken to make hand holes and larger full size access holes

EN1143-1 - This is a burglary attack test standard for Safes, ATMs and strong rooms. It is the main standard used throughout Europe to assess the security level of safes and it is much more demanding than EN14450. Safes are attacked using a set list of tools, and scores are given depending on the time taken to make hand holes and larger full size access holes. There is a large range of security grades within the standard from 0-XIII. There are also optional tests to prove resistance against core drilling CD and explosives EX

EN1143-2 - This is a very similar standard to EN1143-1 but it is specifically designed for deposit safes and systems. In addition to the normal tests of EN1143-1 there are additional tests to assess the ability to fish items out of the deposit systems. If you are purchasing a certified deposit safe, make sure that it is certified to EN1143-2 and not EN1143-1

Safe Fire Standards

EN1047 - This is a very rigorous fire test for safes and data rooms. Safes are subjected to very high external temperatures inside a furnace of approximately 900 °C. Internal temperatures are closely monitored with numerous thermo-couples. There are three levels of protection given:

- P** - Paper documents that will lose data above 170 °C
- D** - Computer media that will lose data above 70 °C and humidity above 85%
- DIS** - Computer media that will lose data above 50 °C and 85% humidity

This particularly tough standard also includes a drop test to simulate a safe falling through a collapsed floor, and a soak out period, where the safe must naturally cool down as it would in a real life situation

EN15659 - This is a similar standard to EN1047 but it does not include the drop test or the soak out period. It is therefore not quite as rigorous. It also only covers protection for paper, not computer data

Gun Cabinet Standards

Sold Secure - A burglary attack test covering various products including home safes, cabinets, key safes, gun safes and gun cabinets. They have three ratings of Gold, Silver and Bronze

BS7558 - This is a British standard for gun cabinets. The required threshold to pass this test is lower than EN14450 or EN1143-1

TEST AND TRADE Organisations

Test and Certification Bodies

ECB•S

A world renowned German certification body, certifying safes, strongrooms, ATMs and security doors. They are accredited to ISO-IEC 17065.

ICIM

This is an Italian certification body.

LPCB

This is the Physical Security test and certification arm of BRE. BRE is a much larger, British testing and certification body with a global reputation.

SBSC

This is a Swedish certification body.

Secured by Design

This is a UK Police run initiative offering certification to multiple security products and also wider schemes.

Sold Secure

This is a British test and certification body, owned and run by the Master Locksmiths Association.

VDS

Leading German testing and certification facility.

Trade Organisations

AiS

The Association of Insurance Surveyors is a UK body of risk control and reduction experts, who work within the insurance market.

ESSA

This is a global trade organisation for Safe, Strongroom, ATM and Security Door manufacturers and distributors.

BRITISH SAFE AND VAULT TRADE ASSOCIATION - BSVTA

is the UK trade body for the safe industry. They promote good standards, certification and ethical practices.

Eurosafe

This is the European parent organisation of BSVTA.

MLA

Master Locksmiths Association is the main trade body in the UK for locksmiths.

Secured by Design

This is a Police accreditation scheme for security product manufacturers and distributors.

NAEP

Founded in 1997, organisation championing the appropriate care equipment in the community.

Safe Contractor

Being part of the Safecontractor accreditation scheme checks mean we meet the necessary requirements around health and safety, equal opportunities, diversity and environmental management practices. So our clients can be confident about us and reduce risk in their supply chain.

ATMIA

ATMIA is the leading non-profit trade association representing the entire global ATM industry. ATMIA serves more than 11,000 members from over 650 companies located in 70 countries spanning the entire ATM ecosphere, including financial institutions, independent ATM deployers, equipment manufacturers, processors and a plethora of ATM service and value-added solution providers.

E.A.S.T

The European Association for Secure Transactions was formed as the European ATM Security Team in 2004 to focus on ATM security when card skimming was a rising issue in Europe. Its remit now covers both Terminal Security and Payment Security.

Awards

MLA

Awarded BEST PRODUCT at the MLA EXPO 2023! The Companion Fingerprint Safe was voted best product by the Master Locksmith Association (MLA).

IFSEC

Burton Safes are delighted to have won the IFSEC Physical Security Product of the Year 2013 award. The award was given for the Eurovault Atlas Grade 7, the UK's highest rated security safe to have passed the European EN1143-1 Grade 7 attack test.

IFSEC / FIREX

IFSEC AND FIREX COMBINED SECURITY & FIRE SOLUTION OF THE YEAR WINNERS What a result for the GP-X, designed and manufactured by the ATM SAFE team! We won Combined Security and Fire Solution of the Year at the IFSEC Security Excellence Awards 2015.

ATMIA

WINNER of the prestigious 2018 ATMIA Global Industry Security Award for ATM Physical Security Excellence for our best-in-class ATM gas attack and fire protection system the GP-X.

We protect what
you care most about!

Home and offices safes

Home Safes

Our Home Series are the perfect security furnishing for any residence. With products ranging from £10k jewellery rating to £350k jewellery rating there is something for every need. All safes from £40k valuables rating are certified by internationally recognised test houses and are validated in the UK by the **Association of Insurance Surveyors**, providing peace of mind when storing those treasured possessions.

Market leading value, award winning safes for customers who want guaranteed security at the most affordable price.

Tested and certified to independent British & European standards by reputable and widely recognised laboratories and certification bodies.

Our Secured by Design (SBD) accredited products meet the Police Preferred Specification, providing a recognised standard for all security products that can deter and reduce crime.

High Security Safes

From £100k jewellery rating to Europe's Highest security safe providing £2.5M jewellery rating; all of our high security products are independently tested and certified by internationally recognised test houses and validated by the Association of Insurance Surveyors.

At Burton Safes we work on some of the world's most secure sites. That experience filters into our products and the benefits reach you. Our range contains models with features such as double walled steel products with ultra-high performance concrete, certified fire protection, relocking devices, glass plates, and special drill protective elements for the lock and bolt work.

We deliver key and electronic locking solutions, including the use of the latest biometric technology.

Our locking solutions include features such as alarm and CCTV integration, dual user entry, time delays and windows, duress codes, temporary and one user time codes to name a few. We also have a wide range of optional extras to provide for every eventuality, whether that be jewellery inserts or additional shelves.

- Connects to your building alarm system
- Prevents operation of your safe whilst the alarm is activated

Signal Blocker

The sure defence for contactless cards, keyless vehicle keys and distracted driving.

- Police Preferred Specification
- Fits all key fobs, smart cards and phones
- Blocks all signals from cards, key fobs and phones
- Blocks GPS tracking
- Expertly tested to a 99% success rate
- Double stitched reinforced seams
- Spare pouch

Seismic Sensor

- Detects specific vibrations from unauthorised attempts to penetrate the safe
 - Fast reacting alarm system
- Has optimum sensitivity, detecting unauthorised access and preventing false alarms
 - Suitable for noisy environments

We can also provide door contacts and opening counters

*Securely store your
valuables at home!*

Wall & Underfloor Safes

Our range of Wall and Underfloor safes provide a concealed option to protecting cash, documents and valuables. From deterring thieves and satisfying insurance requirements, to providing protection from flood damage.

Installing a Wall or Underfloor safe can help where space is a premium or where security and peace of mind of a hidden safe is desired.

Our wall safes are ideal for operating at head level and keeping away from ground level should flooding be a risk. With a £4k cash, £40k valuables and £6k cash and £60k valuables options we should have you covered.

The Sotto underfloor safe is unique by providing an adjustable telescopic depth adjustment, stylish dust cover lid and recommended £4k cash and £40k valuables cover.

The Oculito underfloor safe is supplied with a high quality water-tight lid, steel mesh neck with a recommended £17.5k cash and £175k valuables cover.

*The Sure Defence
against fire damage*

Fire Safes

Burton Fire Safes are The Sure Defence against fire damage, built to a Police Preferred Specification Secured by Design and offering a combination of fire and security protection for your valuables, documents, paper, USB's and data.

The Firesec range is insurance approved by the AiS for cash and jewellery cover ratings, independently attack tested to EN standards and suitable for storage of controlled drugs with active ingredients exceeding 500g. All our fire safe models are tested and certified to EN15659 LFS 60P by world renowned German certification body ECBS.

If you require fire protection for your safe, Burton Safes recommends you should only purchase products that have been independently tested and certified to these standards.

TESTED SOLD SECURE BRONZE - SILVER - GOLD

Tested and certified to Firearms cabinets SS302:2020 by Sold Secure
Police Preferred Specification – Secured by Design

Gun Safes & Cabinets

The Gun Safe range is suitable for shot guns and rifles and accommodates most models with scopes and silencers fitted. Securely store your guns in high security gun cabinets that are made to the Police Preferred Specification under the Secured by Design scheme.

These models are ideal to secure a gun collection, with high density foam gun holders and base, holders for cleaning rods and ammo belts, internal lockable ammo box and optional side shelf for other valuables. Furthermore, this range has a choice of locking options: single key, mechanical combination, electronic PIN, or biometric locking system.

Our Pioneer, Warden LFS and Gamekeeper models have been tested and certified to the Sold Secure Firearms Cabinets Standard SS302:2020 Bronze, Silver and Gold respectively.

We are proud to be first to achieve all 3 British test standards certified by Sold Secure which is owned by the Master Locksmith Association.

*Safes for hotels,
guest houses, Airbnb,
holiday homes and villas!*

Hotel & Guest Safes

The Hotel Safe range has a simple locking system that can be used with complete ease and by multiple users. These models have display screens, back lit buttons and audible sounds to easily guide users through their operation.

The guests can choose a 3-6-digit code; few enough digits to prevent guests forgetting, whilst also being secure. In the case of a guest forgetting or, if the batteries in the lock run out: this range features an override emergency key and master code.

This range of products can also be ideal for student accommodation, Airbnb and domestic use.

Extra Audit & Emergency Opening Tool - Sold separately

Retail Safes

Deposit safes have become a necessity for businesses as hold up situations and internal fraud have become an increasing threat. Some of these safes have been independently tested and certified to EN143-2 by ECB • S.

Having a separate deposit drawer means staff can deposit cash/ valuables without having access to the main safe.

Both the drawer and the safe door are fitted with separately operated high security locks. These models have optional locking including mechanical combination, electronic PIN or advanced biometric locking systems.

Till Safe

The drawer deposit means staff can deposit without accessing the main safe and is suitable for the storage of office documents, equipment, cash and valuables.

SYNGUARD

ACCESS TO THE FUTURE

Open Access Management Platform

Synguard stands for the automation and digitalisation of your entire access management. We make integrations in one open and flexible management platform. We ensure that security, efficiency and user experience always take centre stage with the use of the latest technologies.

OUR SOLUTION

Our expertise is access management software and the accompanying intelligent hardware.

With powerful api's and secure protocols, we integrate all other peripherals and other software solutions from world players, each focuses on its own domain/product.

Unlock your full potential for all stakeholders:

With an open access management platform you can make integrations with third party applications.

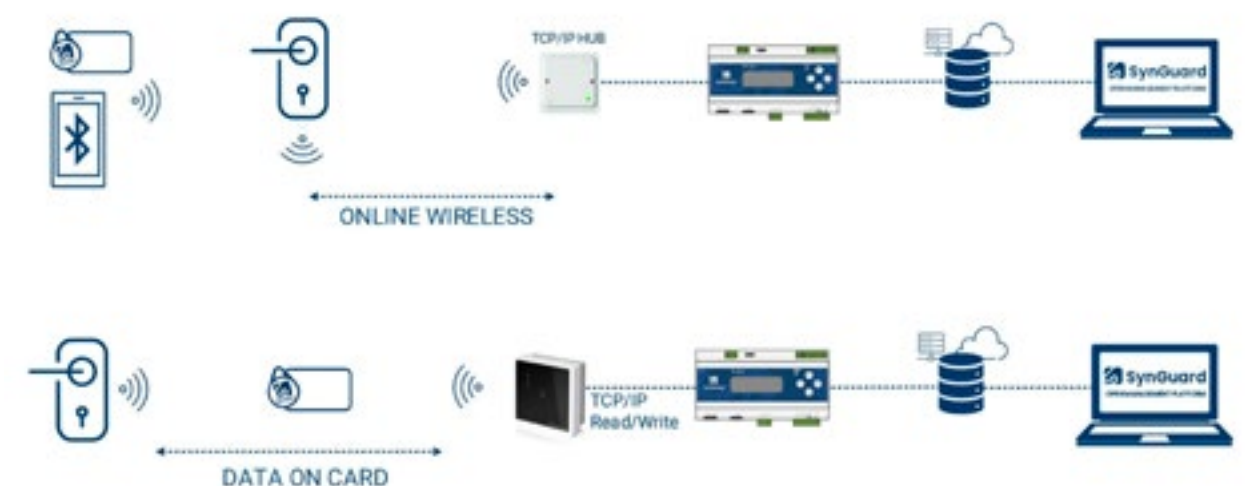

Always with you Burton Security and Synguard working together in partnership. Experts integrating physical security and access management.

Synguard develops access management software and associated intelligent hardware from our headquarters in Belgium.

Our goal? Developing a secure open access management platform together with our customers, that meets 100% their needs and expectations.

With leadership and proximity to our certified partners and end-users, we provide an excellent and reliable service. from start to finish, from complex migrations up to final delivery. Hence our baseline: "Always with you".

Burton Security is a certified Synguard solution partner.

SAFE LOCKS

Burton Safes work with all of the world’s major safe lock manufacturers to bring you a wide choice in locking solutions and access control for your safes and vaults.

Below are some of the more popular models but please enquire if you have a specific need and we will find a lock to suit your needs and budgets.

We have strategic partnerships with **Insys** and **Kaba**, ensuring that we can provide solutions for the most demanding of commercial environments - CvIT, banking and large retail estates.

Burton Duo Fingerprint Lock

ScanLogic Basic
FPC-1808-II (VdS)

**To be used with locks
EL-0601, EL-0701, EL-0901**

Specifications

Rated voltage: DC 9V
Working temperature: -25° ~ 60°
Humidity during use: <90%.
Code length: 6 digits

Only suitable for indoor use

*Safe locks certified in accordance with
EN1300 are not permitted to be opened
by fingerprints only (without additional
code entry).*

**New featured product Dual fingerprint and code
lock upgrade available on all graded safes**

Important

- Always carry out programming when the lock is open and safe door is open.
- Before closing the safe door, make sure that all the programming is correct.
- Check a new code at least 3 times before closing and locking the door to ensure that the code has been changed correctly.
- The system does not allow the master code, the manager code, and the user code to be set at six zeros (0-0-0-0-0-0) or six nines (9-9-9-9-9-9).
- To save battery power, the system switches to standby mode if no button is pressed within 10 seconds. Standby mode is indicated by two short beeps. Input processes that have not yet been completed must be repeated completely.
- Do not allow your personal code to be spied on. When entering the code, always cover the keypad as well as possible so that no one can see which numeric key you are pressing.

Locking

At Burton Safes we have a huge range of locking options.

See page 66 for full details on our recommended models.

With the original design concept of being ‘Easy to use’ the KABA Axessor USB delivers a huge range of functions, via a simple visual input unit. One interesting feature is the DURESS function. This facility enables the lock to be connected to an alarm system, activating a silent signal to a remote monitoring station or to the Police when the user is under ‘duress’ by entering a slightly different code – this can also trigger a time delay if programmed.

Kaba Axessor USB

- Duress Code
- 18 Users
- Time Delay
- Time Lock Periods
- Battery Powered
- Clear Display
- Dual / 4 Eye Function
- Audit Trail of 10,000 events
- Alarm Connection
- Wrong Try Lockout (4 false attempts)
- Tamper Function
- Holiday Periods

The KABA Axessor USB is one of the most efficient and reliable locks on the market – suitable for domestic and commercial use, contact the office for a full description and to discuss your locking needs.

Insys flex ID

A flexible locking system for security containers like gun cabinets, safes, secure cabinets or entry and access doors. Access takes place contactless via RFID card or RFID tag. Stand alone or with a state of the art software system, Elocomm, for programming, control and audit. The Flex brings full access control functionality to your secure storage needs.

- High-quality motor lock and compact RFID reader unit
- Easy, quick opening via RFID card/RFID tag
- Easy enrolment of additional users without configuration software and keypad
- Adding of up to 99 additional cards/tags possible
- Manipulation blocking and automatic locking
- Emergency power supply
- Time delay, dual code and external release/blocking (only EloStar® flexID multi)

Safe Lock Terminology

Users – Unique individual’s code that can be controlled by a “Master” or “Manager”.

Dual user - If Dual user mode is set in your safe it will require two different user codes to open the lock. This means two people will need to be with the safe to open it, this helps prevent internal fraud.

Courier Code - Courier codes are generally used by CViT (cash and valuables in transit) to bypass any time delay settings within the safe and sometimes the time windows.

Duress Code – A duress code is a covert distress signal. When you input the code, a silent alarm will be sent to the Police or a monitoring station in the event that you are forced to open your safe.

The Duress code can still open the lock to the safe.

One Time Code - OTC (one-time code) is a code that can be created and passed to a user to open the safe – once they have used that code it will become invalid. These are often used by CViT (cash and valuables in transit) operators.

Time Delay – A time-delay is a setting that delays the unlocking of the lock by a user-definable period. After entering your code you wait the set time before you enter your code a second time to open the safe.

Time Lock – Weekly programmable timer installed inside, which allows the user to set time intervals that control when the safe opens – i.e. you can open the safe in-between 9am and 5pm but not outside of those hours even if you know the code.

Audit Trail - This logs every event within the safe – Which user opened and closed the safe, at what time. It will never show the code, just the user number i.e. User 2 opened the safe at 2:30pm 30/08/2018.

Biometric Option – Fingerprint controlled security lock. These locks come with the option of fingerprint access, code access or both.

Swing Bolt - Once a correct code is entered, the lock is released, allowing the boltwork to move when turning the handle.

Dead Bolt - Once a correct code is entered, the user has to manually move the locking bolt, usually by turning the keypad.

Motorised Bolt - Once a correct code is entered, the lock moves the locking bolt via an electronic motor.

THE SURE DEFENCE

*Let us help solve
your key problems!*

Key Safes and Key Management

The Key Safe range is the perfect security solution for securing and storing keys. This range includes Keyguard allowing authorised access to carers, cleaners, workmen, dependents, holiday lets, and key cabinets designed for use in showrooms, garages, universities, schools and large commercial sites.

We provide products that answer a variety of requirements: UK Police Preferred Specification under the Secured by Design scheme, and the Keyguard Digital XL is certified to LPS1175 (Issue 8) A5.

LPS1175 Issue 8 is an independent attack test certification. A tool list is selected and then time given to withstand a physical attack. Keyguard XL is the first key safe to achieve this level.

LPCB is part of the BRE Group, the world renowned certification and testing facility who test and certify products to the very latest attack methods.

High Security Solution for storing keys

Keyguard Digital XL

- The world's first key safe to be successfully certified to LPS1175 Issue 8
- Police Preferred Specification
- Independently tested and certified to LPS1175 Issue 8 A5
- Permanent, lightweight, weather-resistant cover provided. This doubles as a fixing template for quick and easy install
- Bright numbers and indicators for ease of use
- Internal key hook
- Over 4,000 possible code combinations
- Code can be changed multiple times
- Allows storage for multiple keys or key cards
- Fixings are provided
- Also certified for fixing to rendered walling
- 5 year warranty

THE LUXURY RANGE

The Luxury Range from Burton Safes offers our clients the highest level of security, engineered to the most detailed level of precision. With over 30 years experience providing global security solutions, we have built a reputation around luxury, security, integrity and customer service.

Burton Safes is a leading supplier of luxurious security solutions, customised in Yorkshire, UK and delivered Worldwide. Our dedicated team of security experts work with our clients every step of the way, from design, planning and implementation.

We understand that each project is different which is why we build a security solution bespoke to each client. This could be a custom designed safe or even an internal security door, to aesthetically match other doors within the property.

Our Head Office and customising facility in Holmfirth, in the heart of Yorkshire, UK, is also the home of our Eurovault LX luxury safe. Our Eurovault LX offers a complete bespoke solution to create your perfect safe. Our team of expert craftsmen and women strive for perfection to create every unique Eurovault LX masterpiece.

The finest solid wood, hand crafted jewellery drawers finished in luxurious suede or leather offering the highest standards of British craftsmanship. Jewellery drawer layouts to suit all type of valuable possessions, including the option of integrated watch winder modules to show off the finest time pieces. Our expert team have designed and created bespoke luxury safes that have been delivered worldwide.

THE LUXURY RANGE

FROM BURTON SAFES

AS BESPOKE AS YOUR INDIVIDUAL NEEDS

We offer a unique experience with over 30 safe sizes available. They are handcrafted in Yorkshire, UK. Our bespoke safes are finished to the highest standard. Our team of expert craftsmen and women provide luxurious, bespoke solutions. We can meet almost any requirement. Including handmade jewellery drawers and hand crafted upholstery. We use only the finest suede and leather.

We understand that each project is different. Which is why we build a security solution bespoke to each client. From matching colour swatches from your favourite car. To hand-stitching your family crest into the interior. We can ensure your safe is the only one of its kind in the world.

The Eurovault LX range is available in a variety of sizes with security grades ranging from EN1143-1 Grade 1 up to Grade 7. Other options in the range are glass fronted display cabinets and gun safes.

- Jewellery and valuables cover from £100,000 to £2,500,000
- Over 30 safe sizes available
- We can offer luxury security doors and panic rooms installed to meet you and your home's security needs
- Full design, consultancy and installation provided by the Burton Safes Luxury Team

When you place an order you will be assigned a project manager. They will oversee the process from design to build, to the final installation. With over 30 years experience of providing security solutions globally we have built a reputation of integrity and customer satisfaction and helped keep homes and families safe for decades.

AN EXCLUSIVE RANGE OF EXQUISITE SAFES USING THE FINEST MATERIALS. ALL HAND FINISHED USING THE BEST BRITISH CRAFTSMANSHIP TO GIVE THE SAFE YOUR PERSONAL TOUCH.

SAFE ROOMS | PANIC ROOMS SECURE ROOMS & VAULTS

AT HOME, AT WORK, AND IN LEISURE

EMBASSY MODULAR STEEL SECURITY WALLING

THE SURE DEFENCE

PROTECT YOUR FAMILY AND VALUED POSSESSIONS

WITH AN EMBASSY SAFE / PANIC ROOM.

With over 30 years' experience providing high security physical protection products, Burton Security can provide the best solutions to protect your family and most valuable possessions. Working with you allows us to design the highest level of bespoke safe rooms and vaults for your family to take lifesaving shelter during a robbery, burglary, home invasion or terrorist attack.

EMBASSY MODULAR STEEL SECURITY

Walling

A safe room, or panic room as they are often called, provides a safe hiding place for your loved ones until your security team or the emergency services can be contacted.

Coordinating directly with your interior designer and architect ensures that we identify the protection level required to create safe rooms that are attack resistant, bullet proof, functional, safe and aesthetically pleasing.

We have a choice of security rooms and walling levels to protect against physical attack tools and ballistic weapons, such as pistols, handguns, and rifles. Additionally, our range of luxury armoured and sliding doors can be hidden from view, something that can be specified during the design process.

PRIVATE RESIDENCES, LUXURY APARTMENTS, YACHTS AND OFFICES

An Embassy safe / panic room or a vault can be built as a stand-alone room or we can discreetly convert existing areas of the home, such as bedrooms, walk in wardrobes, guest rooms, ensembles, living rooms, offices, and garages to keep your family and valuables safe from intruders.

Our designs include adjoining rooms to create a central places of safety for the family with hidden armoured doors, manual or powered sliding doors, access control and window protection such as shutters, bar sets and bulletproof glass for the highest level of protection.

Embassy panic rooms are ideal for high-net-worth individuals, dignitaries, and celebrities wanting to avoid life and death situations and protect the family in setting such as private residences, home offices, holiday homes, luxury apartments, and super yachts.

For larger ground floor installations designed to protect collections, art, classic cars, jewellery, precious metals, cash, and important documents we also have a range of strongrooms and vaults made from heavier steel and composite constructions.

High Security Doors

Armoured security doors at the property boundaries can provide an additional layer of protection and time critical safety so you can reach your panic room in safety!

Embassy Design

Enables architects and specifiers to embed secure design from the outset, creating the perfect balance of security and luxurious interior design.

Embassy modular security steel walling and rooms installed for maximum protection worldwide.

EMBASSIES, HOTELS AND SCHOOLS

In a world where the threat of terrorist attacks has become more common on Government embassies, hotels, retail areas, and sadly in schools too, the protection of personnel within safe areas of retreat has become more important to our way of living and is rightly now the everyday duty of care for many.

Our Embassy modular steel security walling is ideal for designing bespoke rooms or converting existing rooms to offer a high level of physical attack protection, ballistic resistant walling protection combined with bulletproof door sets creating the safe room required.

In these environments a well drilled emergency plan incorporating a designated, professionally designed safe room can save lives and help reduce the risk of robbery and hostage situations.

Working with your architects and designers each Embassy walling or safe room installation can be decorated discreetly to match its natural surroundings and create a hidden room or become part of a luxurious experience for clients, guests, visitors, pupils or staff.

Physical Security

Provides time delay. Delay equals safety and time to notify the Police authorities!

High Security Armoured Doors

We provide a large range of security door sets including traditionally hinged, luxury, and bespoke sliding door models!

Escape Rooms

An Embassy safe room is an ideal place of retreat and safety if under attack during a robbery, aggravated burglary or assault!

It has been estimated by U.S. News that more than 50,000 pieces of artwork are stolen globally each year, and that 40% of these crimes are committed in the UK. In addition to the billions of pounds worth of loss attributed to these thefts, storage vault fires have accounted for many millions more.

The risk to art, film and musical history has almost never been greater as general concerns surrounding worldwide security matters continue to grow, and as the threats from terrorism and armed robbery also remain high.

Whatever your requirements, choose Embassy security rooms and doors to create the ultimate protection against burglary, robbery, fire and armed assault.

We carefully listen to our clients so we can fully understand their security needs, concerns and lifestyle. With a collaborative approach with our clients, their designers and architects we work to exceed expectations in all that we deliver with that personal touch which makes us unique in our approach.

Embassy is manufactured in the United Kingdom through design, innovation and investment in British engineering.

We look forward to discussing your luxury bespoke requirements with our professional team as

Working with your professionals drawn from architecture, interior design, construction and project management fields we can provide an exclusive range of exquisite safes using the finest materials. All hand finished using the best British craftsmanship to give the safe your personal touch.

Our team will ensure that everything is taken care of, from design to install we give you complete transparency and privacy.

We have a wealth of expertise in-house that sets our services apart in the world of personal and valuables protection in a luxury setting

RETAIL AND COMMERCIAL

From the world's most advanced safe deposit centres in Hong Kong, to securing cash, bullion and valuables in banks and retailers across Europe and the Middle East; the team at Burton Security have the experience to advise, design, and deliver physical security solutions to protect you, your staff and your assets.

Embassy modular steel security walling, vaults and high security doors are ideal for designing bespoke rooms or converting existing rooms to offer a high level of physical attack protection, ballistic resistance, and controlled access or fire escape.

Our security solutions and safes can be found in most high street stores, superstores, banks, safe deposit centres, and protecting high street ATM's.

Unfortunately, the current cost of living crisis has seen a huge increase in theft from supermarkets. Working with heads of security we have designed anti-theft solutions to protect the stored cash within self-checkout machines, safely prevent snatch theft shoplifting via fire escapes, supply trolleys to aid the safe transit of cash through busy stores, and the ever-important service and daily management of all types of onsite security assets.

With a burgeoning reputation for providing turnkey solutions Burton Security are the perfect partner for anyone considering investing in the security of safe deposit centres, sanctuary rooms for high-net-worth individuals, cash handling areas, retail stores, bookmakers, banks, and home security too.

TECH TALK

1001.01 is a technical document that specifies the performance requirements that equipment should meet to satisfy the needs of certification and procurement bodies as well as the individual user.

We have a large range of bespoke and off the shelf solutions developed for storing guns, protecting personnel in armouries, at shooting ranges, and which provide physical security protection when threatened with a firearm.

Our modular layered approach to designing and manufacturing Embassy walling means we can apply levels of materials that are fully tested and certified to BR1 to BR7, EN1522 FSG, and EN1523 FSG standards for ballistic resistant protection.

Personnel protection for the inside of gun rooms, safe room or areas used for firing weapons can be lined with our coatings developed and fully tested at Precision Ballistics Laboratories to test procedure 1001.01 for Anti-Spall and Anti-Ricochet properties.

Embassy modular steel security walling is ideal for designing a layered approach for building secure rooms and portable rooms that can include physical security, ballistic protection and anti-ricochet protection.

For smaller or additional secure gun storage and gun collection displays we have a full range of Sold Secure tested, police preferred gun safes and high security luxury glass display safes.

Burton Security's core principle is to ensure products are tested to the highest standards. We are proud to have tested products to LPCB standards and feature in Red Book Live.

DESIGN & INNOVATION

THE SURE DEFENCE TEAM

We are proud to manufacture our Embassy modular steel security walling and safe room products here in the UK. Our growth is through design, innovation and investment in British engineering.

Each project is managed and designed in house meaning we can offer a full turnkey security solution starting with a dedicated security team of experts who will discuss your requirements and start putting your concept plans into a working design.

Our design team will then create CAD drawings to match your space and the security protection level required, followed with a quotation which will be prepared for you to review.

Once the security design project has been agreed you will be introduced to a dedicated project manager who will oversee the whole production and installation process, starting with the all-important on-site survey.

Your bespoke Embassy walling or room will then go into production at our own fabrication workshops, ready for our skilled and fully vetted safe & vault installation engineers to install on site.

EMBASSY RvE WINDOWS & DOORS

CERTIFIED SAFETY – BREATHTAKINGLY BEAUTIFUL

 **BURTON
SECURITY**

 **PR EMBASSY**

EMBASSY MODULAR STEEL SECURITY WALLING

THE SURE DEFENCE

EMBASSY RvE WINDOWS & DOORS

Certified safety – breathtakingly beautiful

We plan, produce and install PfB-certified security windows made of wood and wood-aluminium. The well-thought-out security concept sensibly coordinates fittings, glass, frames and the conditions on site. It offers secure, mechanical protection against burglary, bombardment and fire.

The Embassy RvE windows are custom-made to fit each property and fit perfectly into any architectural style: from historical, listed buildings to contemporary, modern buildings.

THE RIGHT SOLUTION FOR EVERY ARCHITECTURE

Whether for listed buildings or for modern architecture: RvE windows are always made to measure and are functionally and aesthetically convincing.

There are hardly any limits to the shapes and formats. In collaboration with architects and builders, we develop solutions that fit perfectly into the property and meet all customer requirements.

SECURITY WINDOW TYPES FROM RvE

Made to measure

Burglary protection

Resistance classes RC2 to RC4 according to DIN EN 1627

Bullet resistance

Bullet resistance FB1 to FB7 according to DIN EN 1522

Fire protection

Resistance classes F30/T30 to F90/T90

Flood protection

Protection against heavy rain and flooding is becoming increasingly important worldwide. RvE therefore also builds security windows and doors that prevent unwanted water ingress.

Custom-made flood barriers then seal all building openings (windows, doors, light wells, garages, etc.). The RvE flood protection system is also suitable for listed buildings that require protection from flooding.

Craftsmanship at its best!

Exceptional windows + doors by RvE

Good quality wood is a superb material. RvE creates something unique with it. For our windows and doors are special in every respect. Each object is manufactured made to measure: with perfection down to the last detail. As specialists for security windows and doors, we offer you effective protection with the highest quality craftsmanship. Whether for listed buildings or modern architecture: Challenge us. We create your individual solution – functional and aesthetically convincing.

EMBASSY RvE DOORS

Certified safety in its most beautiful form

In our factory we manufacture for you:

- Doors and portals of all shapes, sizes and styles
- From historical to modern for inside and outside
- With the most innovative technology and perfect craftsmanship

We specialize in the planning, manufacturing and assembly of security doors in resistance classes RC2 to RC4. They are certified and, upon request, equipped with bullet-resistant glass and fire protection. The RvE security doors combine high mechanical security, thermal insulation and sound insulation. Barrier-free French doors with a flat threshold are possible up to the RC3 security standard. Do you need a special solution? We would be happy to make you tailor-made suggestions for your building project.

Burglary protection

Resistance classes RC2 to RC4 according to DIN EN 1627

DIN EN 1627 defines different resistance classes (RC = “resistance class”) with regard to burglary resistance, while DIN EN numbers 1628–1630 describe the test procedures. They have replaced the pre-standard DIN V ENV 1627, which defined the resistance classes with the abbreviation “WK”.

DIN EN 1627 specifies in resistance classes RC1 to RC6 how long a window must withstand an attempted break-in. They apply throughout Europe. RC1 windows & doors offer the least resistance, RC6 windows & doors offer the greatest resistance. The class shows you how long an element offers you protection in the event of a break-in.

Everything is checked, from the wall finish, glazing and locking points to professional installation.

- **RC1** low/no burglary protection, therefore not available from RvE
- **RC2** RvE elements in RC2 offer increased burglary protection: They have been proven to withstand a break-in attempt by an occasional perpetrator using simple tools such as screwdrivers, pliers and/or wedges for at least 3 minutes.
- **RC3** RvE elements in RC3 offer a high level of burglary protection: They have been proven to withstand experienced perpetrators using tools such as large crowbars or cow feet for at least 5 minutes.
- **RC4** RvE elements in RC4 offer a very high level of burglary protection: They have been proven to withstand experienced perpetrators using tools such as impact or sawing tools (axe, chisel, hammer, chisel, drill) for at least 10 minutes.
- **RC5** Upon request

Bullet resistance

Bullet resistance FB1 to FB7 according to DIN EN 1522

To protect life and limb from firearms, we recommend equipping your windows and doors with bullet resistance in addition to the high resistance class (RC). The frame, glazing and fittings thus become the best possible security barrier without unnecessary weak points. The glass must be of NS quality (non-shattering). Glass splinters that result from firearms can be just as deadly as the weapon itself.

Throughout Europe, the fire classes FB1 to FB7 are defined according to DIN EN 1522. These classes indicate resistance to attacks with firearms of different calibres. The fire test in German testing laboratories determines whether a window or door as a whole can withstand fire from a specific type of weapon.

PROFILON® security films

Profilon develops innovative blast resistant and impact resistant films that were developed in house; they are suitable for installing to building facades.

Architectural films protect against explosive attacks, break-ins, vandalism and sabotage, displaying resistance levels that correspond with German and European standards. Special security films are also available, are quick and straightforward to retrofit and are designed to effectively prevent glass from falling, for instance due to nickel sulphide inclusions in toughened glass facades.

PROFILON® P4A

Our most highly resistant security film

The security film PROFILON P4A is the film in our PROFILON series with the highest resistant protection.

It is also one of the most resistant security films in the world verified with certificate. It thus offers proven very high protection against burglary, vandalism and attacks with explosive incendiary devices.

Characteristics at a glance:

- Extremely high-resistance security film that provides optimum protection against break-ins, vandalism and incendiary attacks
- Displays blast resistant properties
- Resistance class P4A according to DIN EN 356 A
- Tested by the German VdS and confirmed in the mode of action
- Suitable for use in RC-2 security windows /alternative to glass replacement
- Recommended by insurance companies
- Optimised transparency
- For all types of glazing | for retrofit solution and new constructions
- Guaranteed made in Germany
- Can be combined with sun protection | alarm | eavesdropping

Areas of application:

Protecting administration and office buildings, entrance areas, industrial plants, server rooms / IT centres, galleries and museums, financial sector buildings

Anti-burglary Resistant Security Films

Unlike anti-shatter films PROFILON is tested for security protection. Choose a safety film that meets your security requirements.

Burglary protection films at a glance:

- Burglar resistant properties
- Throw-through resistance
- Resistance class P2A to P4A according to DIN EN 356 - tested and certified on thin 4mm float glass
- RC2 certified - tested on 06.08.2020 bonded to 4 mm float glass
- UV protection

Bomb Blast Security Window Films

Choose a bomb blast window safety film that meets your security requirements. PROFILON® ER1 retroactively imparts bomb blast-resistant properties to single and insulating glass.

Bomb blast protection films at a glance:

- Pressure wave protection
- Retrofittable blast protection
- Splinter binding
- Blast resistant
- Explosive inhibitor
- Flame retardant

Targeted Shielding as well as Transmission of Radiation

Choose a safety film that meets your security requirements. Tell us your requirements and we will find the right film solution to shield radiation in the desired frequency or wavelength ranges.

Privacy shielding protection films at a glance:

- Protection against eavesdropping
- Targeted reflection of EMI
- Adjusted shielding areas
- Data security
- Radiation block
- Retrofittable

Securing Vehicle Windows Film

Choose a car safety security film that meets your security requirements. Car safety films reduce the risk of injury and damage.

Vehicle protection films at a glance:

- Burglary protection
- Occupant protection
- Bullet resistant properties
- Tested by the MPA
- Resistance classes P2A to P4A in accordance with DIN EN 356
- Tested and certified on thin 4 mm float glass

EMBASSY CBX ARMoured SHUTTERS

 **PR EMBASSY**

EMBASSY MODULAR STEEL SECURITY WALLING

THE SURE DEFENCE

EMBASSY CBX ARMoured SHUTTERS

Our wide range of Embassy CBX armoured shutters prevents any gap in your building or business security. You choose the security level you need and the threats you wish to control intrusion, theft, blast, weapons etc. We cover all protection levels and guarantee an elegant and unsurmountable final product.

Our products are fit for all purposes, levels of security and styles to satisfy all security needs. In addition, you can count on our own consultancy services consisting of an exhaustive study of the existing needs and structures, after which we can advise you on the product that best meets your needs.

We have a range of security shutters that offers the maximum protection against bullets, thefts, hurricanes, blasts, fires and Molotov cocktails. Without a doubt, we can provide the safest, most powerful and unsurmountable door for any location requiring maximum security, such as embassies, panic rooms or military installations.

Protect your home

Whether the main entrance, a panic room or even a bunker; our Embassy CBX series guarantees the protection against theft attempts and unauthorised access.

Protect your business

The Embassy CBX system is the perfect way to protect shops, industrial warehouses or premises with special requirements. It guarantees a high protection against professional theft attempts. Perfect for offices, jewellery shops, banks, armouries or IT servers

EMBASSY SECURBAIX RANGE

Securbaix is a security shutter manufactured from extruded aluminium that complies with the most demanding European legislation on doors, as well as including EC certification. The SECURBAIX range is the most effective way to guarantee the additional security in any type of construction. Its design, functional and elegant, facilitates its integration in any façade or interior wall and its wide range of finishings allows the customization of the chosen model.

The SECURBAIX model provides a class 3 protection (RC3) against theft attempts, thus guaranteeing a high security against robberies and intrusions. This model is ideal for constructions where an additional security is required. Its design, functional and safe, includes our E-Key Memory System and its wide range of finishings allow a complete customization depending on the specific needs of each project.

EMBASSY SECURBAIX THERMIC

A burglary-resistant security shutter with thermal and acoustic insulation.

The SECURBAIX THERMIC model guarantees a class 3 burglar proof protection (RC3) in compliance with European standard EN 1627:2011 and is designed for its use in any kind of construction requiring additional security as well as thermal and/or acoustic insulation.

EMBASSY SECURBAIX BL

Burglar-proof and wind-resistant security shutter.

The SECURBAIX BL model offers maximum burglar proof security and is certified to class 4 (RC4) in compliance with regulation EN 1627:2011. It is an elegant, secure and functional door with unrivalled performance for your security. Appropriate for jewelleries, banks, museums and strategic buildings.

EMBASSY SECURBAIX BL VISION

The only security shutter that allows you to display what's inside.

The SECURBAIX BL VISION is a high-security shutter that guarantees a class 4 (RC4) protection against theft attempts (EN 1627:2011). It perfectly combines protection and security with luminosity and transparency.

EMBASSY SECURBAIX BL VISION XL

Burglary-resistant security roll-up door with XL die-cuts.

Designed to maximize brightness and transparency with maximum security against burglary, the SECURBAIX BL VISION XL is an elegant, functional and secure door, with class 4 burglary certification. Its die-cut slats are made from premium alloy extruded aluminium and the 400mm die-cut slat design adds visibility. Includes stainless steel side caps and integrated bearings on the side of the plinth, which provide smoother operation.

EMBASSY DIAMOND SERIES

We shield your peace of mind.

When talking about high security, it is important to know what systems are necessary and what options exist when shielding our peace of mind. CBX systems may combine with different types and levels of protection. Sometimes the use of a burglar-proof door is necessary, but we may also require bulletproof, blast-proof or fire-resistant capabilities and often need all these options combined in one door. This is why we offer the possibility of creating a customized model that responds to your specific needs, based on a series of available options. You will receive an unsurmountable door that perfectly adapts to the structure of any location.

EMBASSY DIAMOND BL

Burglar-proof, bulletproof and wind-resistant security shutter.

The DIAMOND BL door offers an FB4-S bulletproof protection (according to EN 1522:1999), an RC5 burglary resistance (according to EN 1627:2011), and a class 5 wind resistance (up to 1,000 Pa according to EN 12424:2000). Therefore, it offers high security against intrusions, strong winds and armed attacks. Elegant, secure and functional, this door offers the maximum performance for your peace of mind. The size of its slats facilitates the installation of this model in small spaces without losing its bulletproof capacity and being able to endure the impact of a 44-calibre firearm. It is not only one of the most secure doors in the world, but thanks to our wide range of finishings you can customize it the way you prefer to integrate the door in any kind of environment or decorative style (housing, business, industry, etc.). As an option, we can also provide our crystal silver finishing (a special anti-Molotov cocktail layer).

EMBASSY DIAMOND BL X-TREME

RC6 burglary resistance and FB6-NS bulletproof resistance security shutter.

This model masterfully combines technology and engineering through the use of highly resistant materials such as aluminium, titanium or carbon, creating one of the safest and most unsurmountable doors in the world. Adaptable to any location (bunkers, strategic buildings, materials reserves, etc.). Manufactured with straight high resistance aluminium slats with double wall and inferior plinth reinforced with a double wall, shielded slides and anti-friction nylon.

EMBASSY DIAMOND BL X-TREME BLAST

Security shutter that offers the maximum protection against bullets, thefts, blasts and Molotov cocktails.

Our DIAMOND BL X-TREME BLAST model has been tested and can resist explosions of up to 20 kg of TNT situated 4 metres away, in accordance with its EXR5-NS classification (in compliance with regulation UNE-EN 13123-2:2004). It also provides an FB6-NS bulletproof protection (EN 1522), RC6 burglary resistance (EN 1628) and class 5 wind resistance in compliance with UNE-EN 12424:2000).

EMBASSY DIAMOND BL X-TREME MAX

Security shutter that offers the maximum protection against bullets, thefts, hurricanes, blasts, fires and Molotov cocktails

The DIAMOND BL X-TREME MAX model is our most powerful and complete version within the DIAMOND series, including the certifications to the most demanding European regulations. It has the capacity to resist powerful electrical cutting tools, explosions of up to 20kg of TNT 4 metres away, heavy munition such as the AK47, fires for up to 60 minutes, winds of more than 300 km/h and 20 Molotov cocktail impacts. Without a doubt, it is the safest, most powerful and unsurmountable door for any location requiring maximum security, such as embassies, panic rooms or military installations.

DIAMOND BL X-TREME BLAST

We manufacture with top quality materials to offer our clients the best guarantee.

1 ENGINES

We provide high-capacity and high-quality engines, of up to 5,000 Nm of power, ready for any type of international voltage.

3 ANTI-WEAR / ANTI-FATIGUE SHIELDED BEARINGS

Exclusive system with shielded bearings of 10 Tn, making the shutter work properly and always guiding it without fatigues or distortions.

5 BULLETPROOF AND BURGLAR-PROOF SYSTEM

Our exclusive profiles support projectiles of 7.62 x 51 mm, FB6-NS (AK 47 - Kalashnikov), and burglary attempts of RC6 class (maximum burglary/terrorist resistance on international level).

2 SYSTEM OF EXCLUSIVE STAINLESS STEEL CAPS

They do not break or rust, avoiding the profiles of the shutter to pop out laterally, causing expensive failures (exclusive of CBX).

4 ANTI MOLOTOV COCKTAIL FINISHING

This exclusive **CBX** system repels Molotov cocktails through a special treatment applied to the shutter that repels fire and prevents the Molotov cocktail from adhering.

6 REINFORCED PROFILES

CBX manufactures all its shutters in an extruded aluminium alloy of high-resistance that allows sizes of up to 7,000 (width) x 5,500 (height) mm, and 5 Tn of weight.

Elegance and security

ARMoured SECURITY DOORS

Elegance and security designed for the protection of your family and valuables.

TO BE DEFINED AS “PERFECT” A DOOR NOWADAYS MUST BE SAFE. MUST BE ABLE TO UPDATE THE MOST ADVANCED TECHNOLOGICAL LOCKING SYSTEMS.

IT MUST BE FUNCTIONAL, I.E. CAPABLE OF IMPROVING ITS SECURITY, INSULATING AND ACOUSTIC PERFORMANCE.

FINALLY, IT MUST BE ELEGANT AND CUSTOMISABLE TO RESPOND TO ANY TECHNICAL-AESTHETIC CHOICE.

All our armoured doors have been tested and certified in the laboratory to ensure maximum protection and security from break-in attempts. The ability to resist is measured through the stress with static and dynamic loads, and the simulation of burglary attempts implemented with different types of both manual and electric tools.

In some situations, in addition to protection from burglary attempts, fire protection is required. To meet these needs, we offer two models with fire resistance certification of 30 minutes (Fire 30') or 60 minutes (Fire 60').

METAL+ DOORS

AT THE HEART OF EVERY HEINEN DOOR

From the simplest to the most demanding requirements

The Heinen heavy duty, high security steel doorsets offer an unrivaled combination of performances. Options include burglary, fire, smoke, bullet & blast resistance, alongside high acoustic & thermal performance as well as options for emergency & panic escape.

The Metal+ steel doors have always remained faithful to their primary objective: to provide protection while guaranteeing stability and robustness that enable heavy-duty use of the door.

Components of the Metal+ door

- Internal tubular steel framework
- Screwed on metal sheets in galvanised or stainless steel
- Adjustable screwed on hinges for precision fitting

The winning combination for a minimal total cost

- Robustness and extreme mechanical resistance
- Very low cost of use :
simple to replace components + low maintenance
- Combining high performance features
- 10 or 15 years warranty defined by the installation method

Components of the Metal+ Door

Metal+ Doors have the following basic performance features

- 1 Frame (steel sheet 15/10 or 20/10) covering the thickness of the reveal for an attractive finish (with optional thermal break).
- 2 Double lip seal.
- 3 Insulation around the edges of the door (with intumescent material for fire doors).
- 4 Tubular steel structure (60 x 60 x 2 mm).
- 5 Door skin comprising 15/10 galvanised steel sheet screwed into the tubular structure and individually replaceable.
- 6 Self-lubricating hinges, adjustable and replaceable, screwed into the tubular door structure.
- 7 Hyper-strong synthetic material (for optimum protection of the insulation or intumescent material incorporated into the door leaf).

Combining bespoke performance features

Heinen doors can combine performance features on a bespoke basis. Depending on your needs, one or more performance features are added to the basic, robust METAL+ door.

*Without supports

- Designed to withstand attacks from drills, chainsaws, reciprocating saws, concrete cutters and grinders
- Increase the security of armoured vehicles, security walls, security doors, safe rooms, safes, roller shutter and many more security solutions
- Can be used in domestic or commercial properties
- Panels can be cut to any size or shape to meet your requirements
- Space saving solutions as panels are only 5-10mm thick
- Minimal weight increase with panels at just 1 - 1.5kg/pm2
- Easy to apply, and install
- Can be installed as part of manufacture or as a retro fit solution
- 4 different security levels to suit your security needs

Avertic Armour

Avertic Armour is a highly advanced, state of the art security panel providing ultra-light and effective protection against a range of power tools. It's unique properties allow it to be used across many security solutions such as cash-in-transit vehicles, panic room construction, military out buildings, secure room dividers, roller shutters and many more.

Example of vehicle panel construction

Example of secure room wall construction

The Avertic Armour Panel is available in 4 different security levels:

- Anti-Drill**
Contains 8 layers of protective material and provides 18V drill protection
- Power**
Contains 6 layers of protective material and 2 layers of the anti-cut material. It can provide protection against a concrete cutter, chainsaw and 800w grinder
- Power +**
Contains 4 layers of protective material and 4 layers of the anti-cut material. This product protects against a 1100W grinder, reciprocating saw, concrete cutter and chainsaws
- Extreme**
The most secure level of this product, contains 2 layers of protective material and 6 layers of the anti-cut material. This level protects against a 2300W grinder, reciprocating saw, concrete cutter and chainsaws

Tailored versions are available to suit security requirements

SHANGHAI SAFE Deposit Boxes

- A range of low cost safe deposit boxes
- Ideal for use in banks, safe deposit centres or hotels
- Stainless steel facia
- Dual key locking as standard
- 6 different door sizes
- 3 standard depths - 610/510/410
- Optional pull out shelves
- Metal inner box as standard with all sizes*
- Full design and consultancy provided by Burton Safes
- except SSDBB60

Locking Options

Dual
Locking

Box Size	Internal dimensions
SSDBB 60	42 x 120 x 540/440/340
SSDBB 42	65 x 120 x 540/440/340
SSDBB 24	115 x 120 x 540/440/340
SSDBB 21	65 x 250 x 540/440/340
SSDBB 12	115 x 250 x 540/440/340
SSDBB 6	250 x 250 x 540/440/340

The Shanghai Deposit Boxes are available in different sizes and dimensions to accommodate varying room sizes and storage needs. Our team can work with you to determine the ideal size

Shanghai Safe Deposit Boxes

VIENNA SAFE Deposit Boxes

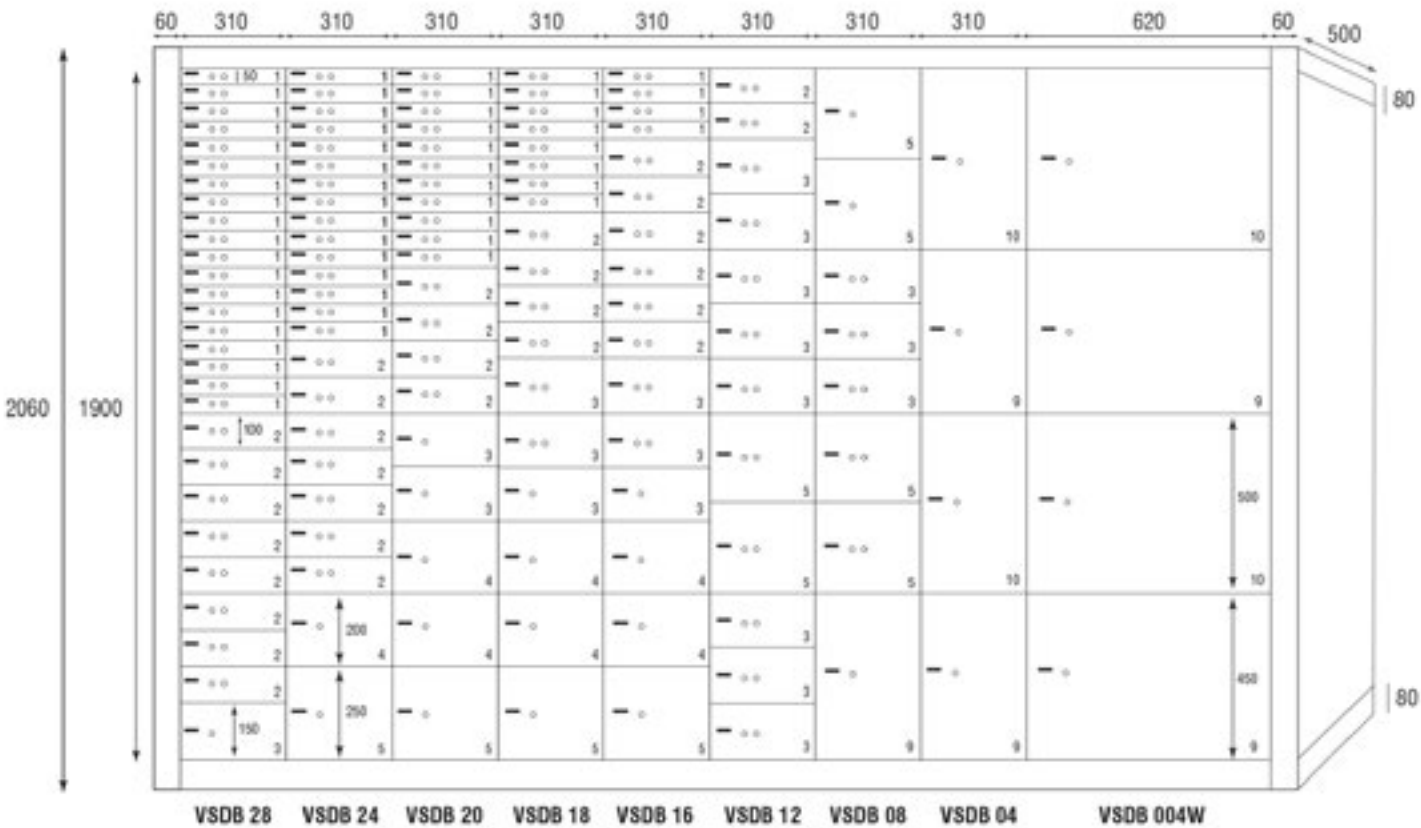

Locking Options

Single Key

Pin

Biometric

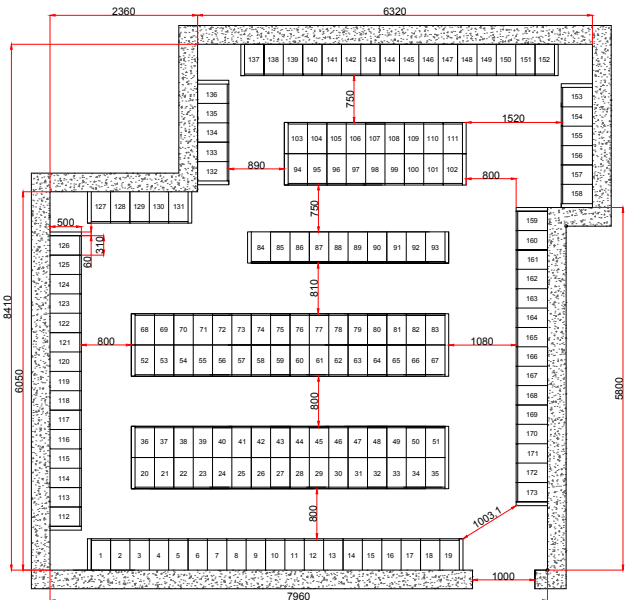

- A range of high quality safe deposit boxes with high security locks and advanced software options
- Ideal for use in banks and safe deposit centres
- 6mm steel door
- Stainless steel facia
- Choice of dual key or key and electronic locking system
- Electronic system offers increased security through permanent monitoring of the door status. Unauthorised entry and tampering will trigger alarms
- Electronic system offers the option of a ‘self service system’. Reducing running costs for banks and safe deposit centres
- Vienna Safe Service 6.0 offers the most advanced safe deposit management system on the market
 - control multiple centres, control day gates and interlocks, monitor box status, record client accesses, set up billing functions and run invoicing
- Key locking systems offer a choice of security levels and lock types to suit different budgets
- Plastic inner cassettes as standard with most box sizes
- Also available in different colour options below the stainless steel facia

Box Size	Internal dimensions
1	48.5 x 265 x 413
2	98.5 x 265 x 413
3	148.5 x 265 x 413
4	198.5 x 265 x 413
5	248.5 x 265 x 413
9	448.5 x 265 x 413
10	498.5 x 265 x 413
9 W	448.5 x 575 x 413
10 W	498.5 x 575 x 413

Industry leading self-service software system option available

Vaduz Safe Deposit Box System

- 24/7 Self service safe deposit system
- Solid steel lockers
- Lockers come in 4 sizes;
50-230mm (H) x 240mm (W) x 360mm (D)
- Vaults certified to EN1143-1
- Dispense lockers through the wall at ground floor level or via a tower dispense system
- Space saving - two lockers can be stacked one behind the other
- Planning, design, installation and maintenance provided by Burton Safes
- Software for administration and control of safe deposit system
- Spare parts guarantee for 10 years

4	230 x 240 x 360

State-of-the-art safe deposit system increasingly used by banks to reduce running costs and offer customers increased access to their deposit boxes. No staff are required for operation of the system and the vault always remains secure. Full design and consultancy is provided by Burton Safes, contact us for more information.

Example of Vaduz vault and safe deposit box construction

THE SURE DEFENCE

THE FIRST TESTED
Lithium-ion Battery Safe

Batteryguard battery safes

The first tested battery safes tested according to concept VDMA 24994, precursor to European standard

Batteryguard battery safes have been tested during the development of the VDMA 24994 paper, the document that will soon lead to the European lithium-ion standard. During the test, a battery in the safe went into thermal runaway. Result: despite the battery fire and explosions, the safe doors remained closed. Thus, the Batteryguard lithium-ion safes are the first battery safes on the market that have been proven to be safe

Fire and burglary resistant safe construction

The Batteryguard lithium-ion battery safes have a fire-resistant safe construction with robust locking. This is important because:

- + The double walls with fire-resistant concrete and insulating materials keep the fire compartmentalized.
- + Thanks to the sealed seams of the safe, toxic smoke gases remain inside the safe.
- + The solid door lock and robust locking mechanism ensure that the safe doors remain closed if the battery goes into thermal runaway. The battery then becomes extremely hot and, in the worst case, explodes.

Not just a cabinet but a safe! Unlike ordinary (chemical) cabinets, where the doors can spring open due to the pressure of the explosion, the doors of the Batteryguard remain firmly closed. This is because Batteryguard is not a cabinet, but a safe!

"I live upstairs with my family. That's the main reason we now have a lithium-ion battery safe."

Rob Hendriks, Owner of Bike Totaal Thijs Hendriks

Batteryguard models

Standard options model *M*

- + Compact entry-level model, ideal for small business use
- + 2 charging points
- + Fire-resistant safe construction, keeps battery fire inside the safe
- + Equipped with CE marking, complies with applicable European guidelines
- + Flue for smoke extraction
- + With door-open warning system

Standard options model *L*

- + Medium-sizes model, ideal for small business use
- + 8 or 10 charging points
- + Fire-resistant safe construction, keeps battery fire inside the safe
- + Equipped with CE marking, complies with applicable European guidelines
- + Meets EN 14470-1 type 90
- + Connection for venting toxic smoke gases
- + Safe alerts if door remains open

Standard options model *XL*

- + Professional model, first tested battery safe (MPA Dresden, Kiwa Group)
- + 16 or 20 charging points
- + Tested according to concept VDMA 24994, precursor to European standard
- + Fire and burglary resistant safe construction according to ECB-S, keeps battery fire and smoke gases inside the safe
- + Equipped with CE marking, complies with applicable European directives
- + Meets EN 14470-1 type 90
- + Prepared for mechanical smoke gas extraction
- + Prepared for connection to alarm system
- + With smoke detector and door-open warning system
- + With controlled charging system: all batteries on the charger at the same time, without modification to the fuse box.
- + EN 1300 certified security key lock on the door
- + 230 volt connection, easy to connect
- + Safe is movable thanks to transport base

Extra options model *XL*

- + Automatic extinguishing system with cooling effect
- + 400 volt power supply connection
- + Lockable locker compartments
- + Modular construction
- + Self-closing doors
- + Electronic code lock on the door

Servicing

We are the UK's leading Safe and Vault security company, providing a large selection of physical security solutions.

Our group supplies retail, commercial, banks and financial organisations across the UK and around the world.

After years dedicated to ATM crime and safe engineering **Adam Greenaway** and **Anthony Shaun Walker** decided it was time to create a company that could serve the industry much better, so in 2014 we founded the **Safe & Vault Company** with the major focus on the **ATM SAFE** brand, products and services.

ATM crime has always been a huge problem in the UK and with our experience, knowledge and dedication we soon struck up partnerships with the **Gunnebo Group** and **Burton Safes** to service the banking industry in the **UK** and across **Europe**.

Our reputation for designing the best quality physical security products and providing a 7 day week support service, meant we were soon successful and proud to win a contract to protect the Cardtronics ATM estate (the largest in the world and now owned by ATM manufacturer NCR) against physical crime and gas attacks.

With Gunnebo exiting the UK banking sector it left us with an opportunity to restructure and grow the company, so in 2019 we merged with Burton Safes and created the **Trusted Security Group**.

With the merger we are pleased to introduce **Tony Lever** to the ATM team as our Sales Director. With his vast experience in the security industry we feel the team is now complete. Tony is already very active in the industry and representing us on the ATMIA Board and organisations such as **E.A.S.T** and The **UK Cash Supply Alliance**.

By the end of 2022 we will have moved all our operations to one much larger headquarters in Brockholes, near Huddersfield and now trade as Burton Security Limited to cover all our brands ATM SAFE, Burton Safes and Safe & Vault engineering as we continue to develop, design, innovate and grow...

We use the latest technological advancements and high quality materials to produce state of the art solutions for the atm industry.

THE SURE DEFENCE

Internationally Recognised

Award winning solution

WINNER of the prestigious 2018 **ATMIA Global Industry Security Award for ATM Physical Security Excellence**.

New innovative, cost effective security products are our mission! For example we are very proud to be the first company in the UK to complete real time ATM gas attack testing, then design and produce a new ATM gas protection system, the GP-X.

Live testing sessions have been witnessed by Banks, the MOD and fire and security experts in the UK, Greece and Chile!

Joining ATMIA in 2015 was a priority for ATM Safe and we look forward to another busy year protecting the ATM industry.

"As CEO of the worldwide ATM Industry Association, I would like to congratulate Safe & Vault's ATM Safe for successfully bringing the innovative Gas Protection X (GP-X) product to market. It takes years of investment and dedication to go from R&D, to prototype and then to make an impact in an competitive market.

The judges were very impressed with how GP-X directly combats the growing global threat of ATM gas attacks, protecting ATMs, cash, property and, most importantly of all, the cardholders using ATMs.

Brilliant!"

Mike Lee

2018 WINNER

2015 WINNER

ATM attacks in the UK

2018 was a record year for ATM attacks in the UK

2014 – 2020 Attacks

Between 2014 and 2018, the frequency of ATM attacks in the UK rose by an average of 22% each year*. 2018 saw a record number of ATM attacks, with more than 800 taking place across the UK.

Although the overall number of attacks does seem to be on a downward trend in 2019** - figures are still at a historically high level, with cash losses set to exceed £5m for the 5th consecutive year.

Positive figures, including a 22% decrease in drag outs, 47% decrease in cutting and 67% decrease in ram raid attacks have been offset by a doubling in the number of gas attacks, and the emergence of attacks using explosives.

A Covid World

On the 31st of January 2020 the COVID-19 pandemic arrived in the United Kingdom. This has had a massive effect on cash usage, retail business and the ATM banking industry.

Police reports indicate that ATM crime dropped off significantly during the major outbreaks, but since late 2021 the ATM attacks have started to rise again!

www.burtonsecurity.com

THE IMPACT – COMMUNITY

Despite the rise of electronic payments, 28% of all payments in the UK are made in cash. 98% of people in the UK still use cash, and more than 73% use it frequently. It is still the primary payment method for more than 2.2 million people in the UK, and just 5% say they rarely use cash.

WHEN ATMS ARE ATTACKED, OUT OF ACTION OR REMOVED, THE IMPACT IS FELT ACROSS THE LOCAL COMMUNITY:

THE POOR AND ELDERLY

Lower income households and older generations are the most affected. More than 78% of households in the two lowest income groups rely on cash. 26% of this group never use cards. In the over 65s group, 80% are reliant on cash.

RURAL IMPACT

In 2013, 31% of ATM attacks occurred in rural areas. In 2018, this figure was 32%, with around 25% taking place in communities without a branch of any bank*. ATM attacks in rural areas have a disproportionate impact on the communities.

ATMs support retailers and cash businesses in their local areas – and after an ATM attack, access to cash can be severely impacted. This impact is compounded in the many rural communities where there is only a single cash point and no bank.

ACCESS TO CASH

It can take up to 4.5 months for cash machines to be replaced following an attack – and in many cases, operators and host sites may decide that the risk of attack is too great to warrant replacement.

Residents then have to travel into neighbouring communities to spend money there, which has a significant, lasting impact on local retail and cash businesses.

THE IMPACT – SAFETY

The worrying increase in gas and explosive attacks also poses significant safety risks, in terms of:

THREAT TO LIFE

Using gas to break into an ATM is extremely dangerous. The resulting explosion can cause fire and is a real threat to life to anyone in the vicinity. In many cases, independent shops may be located in mixed use buildings with flats above them.

Gas attacks can also endanger the lives of on-site security personnel, emergency services and even the criminals themselves.

STRUCTURAL DAMAGE

The explosion caused by a gas attack can cause disastrous structural damage – both to the structure housing the ATM, and to nearby buildings. This can cause expensive and sometimes irreparable damage to the structures, and to those inside at the time/after the attack.

COLLATERAL DAMAGE

Explosive attacks often cause significant collateral damage and disruption to car parks and roads. Services are often disrupted for weeks after the event while risk assessments, investigations and repairs are conducted.

PSYCHOLOGICAL TRAUMA

Explosions can have a significant psychological impact, on individuals and the community at large. This doesn't just have an impact on those directly affected by the attack. Nearby residents and family members close to victims can be left with long term psychological damage.

WIDER THEFT

ATM theft is often tied to organised crime gangs. Cash stolen in ATMs is often used to finance further crime, such as drug dealing and illegal firearms – having an impact on the safety of the community at large.

In terms of ram raids and getaways, vehicles are usually stolen – this can lead to a local increase in vehicle thefts for getaway vehicles.

THE IMPACT – ECONOMICS

In reality, these figures do not tell the complete picture – and the overall economic cost to the ATM operator, shop and local economy can be significantly higher, in terms of:

- Machine replacement
- Cash restocking
- Property damage
- Structural repairs
- Insurance claims
- Higher insurance premiums

BUSINESS IMPACT

In serious cases, a gas attack or ram raid using a JCB digger can cause host businesses to relocate premises or cease trading, as customers are forced to go elsewhere. This can leave a permanent impact on the local community.

ABOUT THE AUTHORS

ATM Safe is part of Burton Security Limited. One of the UK's leading ATM security specialists – We have been trusted by major high street banks, ATM manufacturers, ATM security managers, police forces, alarm companies and ATM cash machine companies across the UK and around the world for more than 30 years.

A multi-award winning, specialist engineering business, ATM Safe produces a range of security products that have saved the ATM and Banking industries millions of pounds.

THE SURE DEFENCE TEAM

From the world's most advanced safe deposit centres in Hong Kong, to securing cash, bullion and valuables in banks and retailers across Europe and the Middle East; the team at Burton Security have the experience to advise, design and deliver physical security solutions to protect you and your assets.

The High Security team have over 85 years' worth of security industry experience and are qualified in security design and consultancy. Dedicated account and project managers ensure an unrivalled customer experience.

Burton Security's core principle is to ensure products are tested to the highest standards. We are proud to have tested products to LPCB standards and feature in RedBookLive.

Why choose Embassy Security Rooms and THE SURE DEFENCE team?

- Award-winning Security Team
- Industry Leading Design and
Manufacturing
- Most Competitive Pricing
- Fastest Lead Times in the Industry
- ISO 9001 Certified Company by LPCB
- Dedicated Sales Manager
- Experienced Survey Team
- In-house CAD Design Team
- Dedicated Project Manager
- Dedicated Installation Manager

Expert in Security

Our High Security rooms and walling systems built to SR1 – SR6 standards, combined with a choice of armoured high security doors provide the perfect solution for building secure rooms to protect ATM's, valuables, critical data or create custom designed safe rooms to protect your assets.

With over 30 years experience designing physical security solutions for banks, cash in transit companies, ATM deployers, safe deposit centres and the largest retail companies, we are one of the few UK security companies that can offer the full Turnkey service in-house with our own R&D CAD design and manufacturing team, surveyors, dedicated project managers and fully trained installation engineers.

Need a higher graded vault room for cash and valuables storage? We have that covered with our popular Orthrus strongroom certified to the very latest LPS standard – LPS1175: Issue 8 and has achieved security rating F10/G5.

Our Cerberus Vaults and Doors are available independently tested and certified to EN1143-1 Grades 1 - 13.

- Fire Protection
- Indefinite Gas Attack Protection
- MOD Tested
- Approved by UK Banks
- Approved by ATM Manufacturers
- Proven under Attack
- Award winning ATM Safe System
- Quick Return on Investment

GP-X ATM system

Although gas raids on ATM's have taken place for over a decade, it wasn't until 2013 that such a burglary took place on British soil. Since then and following a global pattern, there have been more than 300 incidents reported.

Gas Attack Protection

GP-X

The GP-X ATM Gas Protection system has been developed as the very best solution to make your ATM-SAFE against explosions, fire and cash loss.

With our advanced gas detection and explosion control system, combined with UL approved fire protection systems the GP-X has proven itself to be the answer to the real life gas attacks.

Keep your ATM SAFE with the GP-X

GP-X has been proven to deliver unparalleled protection against the ATM gas attacks. Winner of IFSEC and FIREX combined fire and security product of the year 2015 and WINNER of the prestigious 2018 ATMIA Global Industry Security Award for ATM Physical Security Excellence.

Ask our team for your FREE GP-X trial

Using the right combination of inexpensive, easily available and legal explosive gases makes it relatively easy for thieves to explode the ATM and gain access to the at times, hundreds of thousands of pounds held inside.

No wonder then that high street banks and independent ATM companies were starting to be very concerned!

This sudden influx of crime caught the security industry by surprise with none of the traditional security methods proving to be effective.

However, fast off the mark, ATM Safe working with the UK's leading security and fire related companies combined their experience and resources to develop and test an effective gas explosion safe system.

Known as the GP-X ATM gas attack protection system it's the most advanced and fastest detection and prevention solution available.

Any potential explosion within an ATM is rapidly detected and prevented within seconds ensuring that a bank's ATM estate is kept safe against such gas attacks.

Low Cost
Maximum Protection
Fast Return On Investment

As UK experts designing physical security systems we work with Police forces, Scenes of crime officers and the Metropolitan Police Bomb Squad, helping with their investigations, understanding and training.

We have worked with Cardtronics and tested the GP-X system at a UK MOD testing grounds successfully. The GP-X has successfully saved the ATM estate millions of pounds in saved cash losses.

In combination with other Police operations we have successfully saved Barclays Bank from attacks and helped lead to the arrest of a gang targeting bank branch ATM's.

The GP-X has successfully stopped explosion and cash loss for HSBC Bank.

Lloyds Banking Group have deployed systems and seen a reduction in gas attacks.

Our GP-X was field tested by the Greek authorities and approved for the Banks to deploy in ATM's across Greece. We also conducted some development testing in Chile.

In support of our clients and the Police we have attended Crown Court as an expert witness in the gas attack field, which helped the Police put away a gang of 5 criminals who had stolen £1.2 million for combined prison sentences totalling 71 years!

Our GP-X Customers

Deployed by Cardtronics, NCR, HSBC Bank, Lloyds Banking Group, Barclays Bank, Permanent TSB across the UK, Ireland, Greece, Belgium and Denmark

Low Cost
Maximum Protection
Fast Return On Investment

It was apparent to us early on during the design, development and testing of our gas attack protection system that the current products marketed from Europe were fire suppression systems that were not capable of protecting against a real life ATM gas attack.

We also saw companies bring fire solutions to the UK table that were marketed and sold on theory and not actual testing. And other products that just tried to protect against a single blast.

This really worried us because it wasn't the cash loss that was the main concern, but the risk to life and the potential for fires to spread across buildings after the explosion.

This theory was eventually proven when a UK bank branch literally went up in flames.

We tested the fire suppression systems and proved they had no place as an explosive protection, but we saw the potential in them once we had taken control of the explosion, we could use the very best suppression system on the market as a secondary system to put out flames and smouldering rubber after an attack.

Once we had designed the system to control the explosion during exhaustive field explosive and fire testing, we then worked on perfecting flame detectors to deploy Stat-X only if a fire is detected within the safe.

All main components are fitted with magnets for speed of installation.

Alarm connections were soon added for instant Police notification and a safe control system so the GPX was set and un-set just by opening and closing the safe door in normal operation, meaning no staff interaction was required.

A series of unique gas sensors and control methods have been designed into the system that we would be happy to discuss with our clients.

The GPX will continue to protect once activated until it is reset during normal banking hours, when safe and the risk has lowered.

Before being put into practice, the GP-X system was successfully tested in front of Global banks and security companies and only after receiving total approval was the system then installed in ATM's across the country... It wasn't long before GP-X was called into action for real!

Safe Door Protection Pluslocks

Organised Criminal Gang Attacks

Most physical ATM crime is carried out by organised criminal gangs. They usually choose the ATM make and model that they have worked out how to open the safe door quickly and steal the cassettes full of cash. Historically they will steal an ATM and then do their research first and perfect the opening method.

One example of this was a gang who hit Wincor 1500 internal ATM's at motorway services and with a powered grinder cut below the Cencon lock and opened the safe stealing the cash within 3 minutes. They didn't care that the services was staffed at the time!

How To Protect and Disrupt The Criminal

The fast response to these attacks was for ATM SAFE to quickly produce a batch of Cencon ACP protection and install them at a high rate of knots across the country. A higher level of protection was then scheduled in to install our Live Pluslock re-locker to all the ATM so the grinder attack was no longer affective.

The visual ACP bought the ATM companies time and in combination with the Pluslocks the gang stopped attacking the ATM's saving our clients 100's of thousands of pounds per week.

ATM Safe Pluslocks

Also known as Re-lockers or ADK kit.

Re-locker mechanisms built into high security vault doors and safes have been used for centuries, they are intended to keep the door locked in a burglary attempt.

Most UL ATM's and lower level Cen L safes rely on the Cencon lock only for locking protection. The safe door can be easily compromised by drilling or cutting because it is generally a mild steel construction and has no internal re-locking devices.

We have designed a number of Pluslocks that can be installed to relock the safe door under various attacks. These attacks are usually drilling, grinding or using an oxy torch on the safe door to gain access.

At the heart of our re-locker system is our Live Pluslock which adds an additional live locking position within the safe that is operated when closing the Cencon lock.

We have installed 1000's of Pluslocks saving the industry millions of pounds over the years.

Every additional Pluslock installed, adds a higher level of protection

The live lock provides an instant mechanically driven hidden secondary lock position operated by using the Cencon lock.

Great protection against the horizontal grinder, oxy and drill attacks below the safe lock.

The Dead locks provides an extra locking position fired and fired when under attack providing additional protection to the live lock.

The Dead VCD's fire under attack and provide protection vertically to the top and bottom of the safe door (especially required when they try to cut the bolt strap out and cut down the door).

OTC Smart CIT Lock Sentinel

Sentinel – Custodia

The Custodia is a smart ready high security safe lock and key pad providing one-time code CIT function via QR code. The Sentinel keypad is an elegant and flat design with the option of an inclined keypad variant with battery compartment. All Sentinel locks are VdS and ECB-S approved with the class B lock also having A2P Certified protection against burglary. The perfect upgrade for all ATM estates.

Sentinel – Oculus

The Oculus has all the features of the Sentinel Custodia but takes the lock options to new levels by communicating with our PC software for configuration and administration of the lock system or via the TwinIP extension unit for integrating the lock system into the customer network for full monitoring of the ATM safe lock.

Sentinel – Imperium

The Imperium has all the available features of the Custodia and the Oculus with the additional control via our total lock control PC software to provide full access control and management of entry doors, security doors, access control, key access and the ATM safe locks.

The options are endless –
Please ask us for our expert consultation

Case Study

Burton Security were invited to participate in a tender process for the implementation of a new ATM electronic safe locking solution. After successfully exceeding the tender requirements, we were awarded the opportunity to undertake this rollout across the client's UK network of ATM's.

The project included the supply, installation and project management of circa 1,400 ATM Safe locks across a network of 650+ branches. Working closely with the client we designed a bespoke installation process and timetable suitable for the wide variety of ATM models and operational needs of the business. Throughout the project planning several client specific functionality requests were explored, developed, tested and implemented to ensure client satisfaction beyond the original scope.

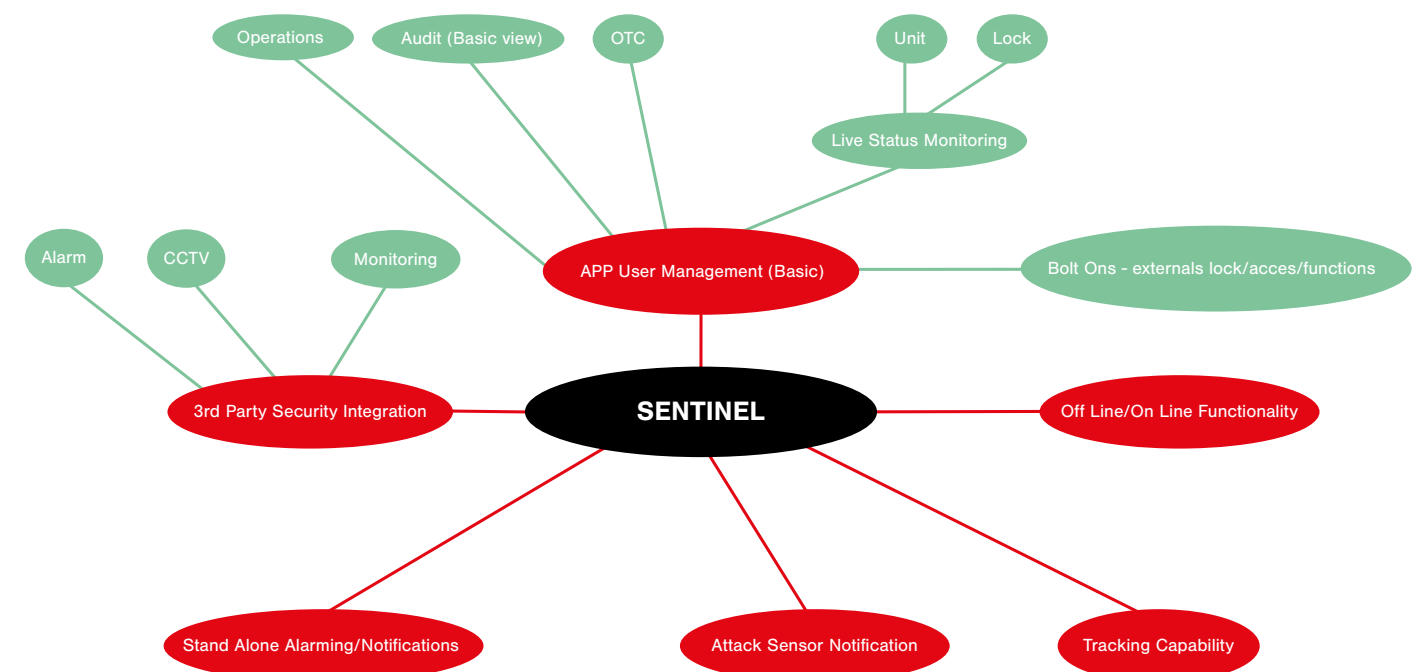

After the planning period was completed the physical installations began. Using our network of skilled and qualified safe engineers we successfully installed to each ATM, in both a live branch and factory environment.

Throughout the entire project, regular reviews were undertaken, and actions applied to ensure an efficient and cost-effective rollout. As a result of the detailed pre planning work and an efficient installation process, the project was successfully completed within the client's requested timeframe of 26 weeks, allowing them to reap the benefits of the developed solution as early as possible;

- Freed up branch colleague time, removing involvement in the ATM replenishment process
- Improved security and efficiencies in the management of staff access to the Locks
- Removal of mastercodes management and responsibility - passed to Burton Safes
- Enabling efficient estate wide changes with the use of configuration cards
- Implementation of One Time Code (OTC) functionality without the need for additional infrastructure or IT Involvement including:

- Auto generation of secure OTC for CIT Access
- Real Time lock status monitoring as part of the OTC functionality

Hydraulic Rescue Tool
(Jaws of life) Protection

Hinge Protection

HYDRAULIC RESCUE TOOL (Jaws of life) Protection

Criminal organisations

Criminals break into the bank or store while it is closed, usually in the early hours of the morning.

They cut the safe door hinges with a grinder and then crowbar and use the Hydraulic Rescue Tools (Jaws of life) to prise open the ATM safe door, leaving the cassettes exposed for them to steal and make a getaway.

The attack usually only last 2-5 minutes with Cen L to Cen 3 ATM's being the focus of target.

This attack MO is a global problem for Banks and ATM deployers.

To add attack time delay protection ATM SAFE have developed and manufacture a range of deployable retrofit visual / physical security systems to help protect against the Hydraulic Rescue Tool (Jaws of life) attacks.

All steel solutions can be powder coated to the RAL of your preference.

ATM HINGE CUT PROTECTION SYSTEM

A 3-piece system comprises of a heavy duty 2-part solid steel 24mm safe door plate with 5mm steel internal bracing mounting plate. All fixings are hidden within the safe door, so it cannot be compromised. The internal bracing plate also helps support the safe door from delaminating.

The safe door outer plate includes 2 overhang lugs that protect the hinges from being cut from the front of the ATM.

Protection to cutting the hinges from the left-hand side of the ATM is provided by the 3mm side armour steel panel, fabricated with built in pockets to allow the front armour lugs to sit within it when opening the safe door and servicing the ATM.

Installation time approx 3 hrs

● ATM HINGE DOG BOLT UPGRADE PLATES

A 2-piece upgrade kit made from plasma cut 3mm and folded solid steel for improving the safe door hinge dog bolts, by extending them into the ATM pockets by an additional 7mm.

This protection kit has been developed as an easy to install retro fit solution that will make it much more difficult to place the Hydraulic Rescue Tools (Jaws of life) into the gap and making it so much more difficult to prise the door away at the hinge side of the ATM.

Installation time approx 1 hr

● ATM FRONT LOADING CUT PROTECTION PANEL

A single piece 3mm steel folded and fabricated armour panel with welded in rebar and filled with our own anti cut composite mixture.

The panel protects the hinges being cut from the side and the front cuts by the panel protruding forward of the hinges.

Visual and physical protection for your ATM.

Installation time approx 1.5 hrs

● ATM ARMOUR PROTECTION PANEL

Protection for the leading edge of the ATM Safe door. This visual / physical solution has been developed to restrict access to the leading edge of the safe door using the Hydraulic Rescue Tools (Jaws of life). A single piece 3mm steel folded and fabricated armour panel with enclosed fixings not only protects

access to this side, but also acts as a crumple zone to make the attack more difficult for the criminals.

This panel can be composite filled and installed to any ATM Model.

Installation time approx 1.5 hrs

Pull Out & Cutting Protection **HALO**

HALO – Case Study

Criminals drive a vehicle into the shop front to gain entry into the store. They then bring a large long wheelbase van and hook a chain to the van and to the internal ATM.

Our client had installed the ATM within our HALO system for maximum protection. The ATM was installed close to the shop door front.

The criminals made several attempts to pull the ATM out, driving off and trying to pull the ATM out over and over again. The strength of the HALO system was lifting the vehicle and throwing it to one side on each attempt until eventually the large chain snapped.

The criminals left unsuccessful and probably thinking what have we just encountered here!

CCTV Video footage is available.

The HALO is designed to add complete protection and attack time delay for all internal ATM's

The HALO system is the crown jewels' when it comes to protecting internal lobby ATM's. During the design and production of the system we looked at ATM crime data, met with ATM security managers and also large retailers John Lewis, The Co-operative Group, Tesco, Asda, Morrisons and Aldi to name a few.

We inspected attacked ATM's, liaised with the Police and analysed the current trend of ATM attack MO's. The crime was varied with different organised gangs targeting different ATM's and stores with their own perfect way of breaching the safe to take the cassettes or by removing the ATM completely from the store.

Our aim was to design out crime by introducing protection into the HALO protection system to cover the lasso rope and chain attack, hydraulic lifters, crow barring, grinder cutting, oxy cutting, drilling, removing the ATM from the store, accessing the back of ATM and cutting an opening in the back to access cassettes and so on.

In addition to the HALO's unique ATM fixing footprint, back protection and side body armour the safe door can be protected with our Pluslocks and door armour protection can also be applied to the ATM safe door.

The Technology

The HALO is specifically designed for each internal ATM model and can be used with all popular makes of ATM from NCR, Triton, Hyosung and Diebold-Nixdorf for example.

The system is constructed from 12mm laser cut solid steel for the floor and back panels with folded steel construction on the sides filled with our own anti-cut composite fill and matrix system to create weight and protection against side and back cutting attacks.

The sides offer an additional 70mm of armour protection to the ATM and protects against drilling, grinding and oxy torch attacks.

The system is bolted and welded together for structural integrity with all ATM fixings concealed within the system. This means you need safe access to reach any floor and back fixings, so it cannot be compromised.

The weight of the HALO adds another 300+kg to the weight of the ATM and when the situation arise that the ATM cannot be bolted to a floor, this could be a good solution to the problem.

The solid steel back panel not only adds cutting protection, but has been designed with our unique to ATM SAFE wingspan that includes 2 widespread additional anchoring positions for the ATM and slip angles to make it very difficult to get good purchase when a chain is put around the ATM. If the ATM with HALO is installed up to the wall it will be impossible to put a chain or lasso around the ATM safe.

Should a vehicle ram the HALO from the side it would very likely climb the HALO and tip over the vehicle. The HALO wingspan also makes the system very difficult to fit inside a vehicle.

The HALO system itself is bolted to the ground via its 12mm solid steel base using 4 x M24 studs and resins perfected and used in our Strongarm anchoring systems.

Connecting the ATM inside the HALO had been designed to easily slide inside the HALO and then is connected from the inside of the safe with 2 x M16 bolts and washers in the floor, an M16 bolt on each safe side and 3 x M16 bolts into the rear.

Ram Raid Protection Strongarm HD

Criminal organisations

Organised criminals have continued to target ATM's by either pulling stand alone (lobby) ATM's out of the ground that are light weight, easy to move and located within retail stores, The usual MO's are by jacking them out, barring them out or attaching a strong rope or chain around the ATM, attaching the rope or chain to a vehicle and using the force of the vehicle to pull the ATM out of the ground and into the street so they can load it in another vehicle and drive off with the ATM filled with cash.

For the larger and usually much heavier TTW ATM's the criminals will generally steal a JCB lifter or telescopic handler to knock the ATM over and lift them out of the Bank or store location.

Strongarm systems

Our mission was to provide a cost effective solutions with the maximum anchoring protection to help banks and ATM companies keep your ATM safe against the current spate of pull out and ram raid attacks. You can then protect the cash within the machines and reduce the threat of any future attacks - reducing substantial damage to buildings and potential loss of revenue.

ATM SAFE has developed a number of solutions for the various ATM models and installation scenarios. The Strongarm HD is an Anchoring chain system with security shield bolted to the ATM and the ground. Perfect for internal ATM's and can be installed on TTW ATM's.

To protect the systems integrity a low cost innovative Strongarm HD shield is also available where required. The security shield fixings are secured from within the safe offering additional anti-tamper protection and integrity to the system, as well as providing H&S anti trip cover.

For the TTW ATM installations we recommend the Strongarm HD plinth that provides extra layers of protection combining the anchoring chain with the plinth design to reduce floor impact forces.

Our Subterra has been designed for external ATM installations where ATM bolting and anchoring is very poor. This system is designed to be concreted into the floor and has been used to protect a number of ATM's in Germany.

Strongarm Anchor

Solution for all ATM's

Innovative fabricated internal locking system housed within an impact resistant mounting block, installed with low centre of gravity fixings.

Strongarm chain link

Tested to and fully certificated 40 tonnes British load chain.

Floor fixing

Easy to install with 2 industry grade concrete floor mounting studs and specific floor bolting resins.

ATM fixing

New especially designed single bolt mounting specification boss with tested chain link flexible mounting coupling.

Strongarm Shield

Available with Strongarm security shield protection cover. Provides a low cost protection shield, providing an extra level of security and H&S to the system.

Compact design

Designed not to impose on critical ATM advertising and branding space, while still imposing a physical presence and protection. Can be painted to any RAL or graphic design can be added.

Strongarm Plinth

Solution for TTW ATM's

The STRONGARM Anchor Plinth is a heavy duty easy level adjustable plinth designed for ease of installation and adjustment.

Security

Includes a built in Strongarm HD Anchor within so it can mount to the underside of the ATM reducing space required for the ATM in the banking hall or store.

Floor fixing

The floor fixings used are 4 x M24 studs 210mm long 8.8 grade with M24 x 45mm washers and M24 nylock nuts.

ATM fixing

Each plinth will be made to exactly measure the ATM footprint. Designed, developed, tested and manufactured by ATM SAFE.

Construction

Laser cut, folded and re-enforced bottom plate with anchor chain welded into position. The chain loops through the steel supporting cross section plate and attached to the steel top plate. The ATM is bolted to the top plate and the anchor is bolted to the bottom of the ATM.

Testing

Our testing replicated the attack MO. For the attack we used a 4.5-ton Wacker Neuson TH522 Telehandler. The Strongarm anchor has passed previous testing using a 7.5-ton 4wd JCB, which was verified in Feb 2015 by Dr. J. L. Hill of DYNAMIQ Engineering.

Strongarm Subterra

The Subterra Strongarm anchoring system has been tested with our clients in attendance. We employed a professional rescue team to try and lift the ATM out of the ground.

Armed with Hooligan bars and hydraulic rescue tools (jaws of life) the team proceeded to attack the ATM and failed to lift the ATM. When attempting to lift the ATM with two hydraulic tools the Subterra continued to protect against crowbarring and jaws of life hydraulic tools.

ADPS Product Testing

For the attack test sessions we coupled up a heavy duty hook and chain to replicate the criminals attack MO.

During the attack session the ADPS system pulled the back axle from the test vehicle.

Door Pull Protection ADPS

Criminal organisations

The criminals break into the store while it is closed, usually in the early hours of the morning. They crow bar open the outer safe cabinet door and proceed to smash the dispenser chute off to give them a larger access hole for a hook.

They then force a large lifting hook into the ATM opening which is attached to a heavy duty chain and couple the other

end to a vehicle. The vehicle drives away at speed and pulls the safe door from the ATM leaving the cassettes exposed for them to steal and make a getaway. The criminals have targeted the Wincor 1500 lobby ATM and the external NCR P77 POD ATM.

This attack MO is a global problem for ATM deployers.

Wincor 1500 Solution

The ADPS for the Wincor 1500 ATM is installed behind the safe door as a fixed device with a locking drop in component within the ATM hood.

- Heavy duty steel fabricated internal boss system with built in vertical re-locker
- External drop in locking bolts assembly locked in place using the ATM keys
- Protects the key area where the hook is installed by reducing the forces to the safe door bolt works
- Operated by unlocking the ADPS system top mounting plate by accessing the ATM hood
- The ADPS is unlocked using the same ATM key

NCR P77 Solution

A multi-layered approach to these attacks was designed for the NCR P77 POD ATM.

The system includes:

- Two hinged locking anti door pull guards
- Two heavy duty hinged plates bolted to the safe body from inside the safe
- Integral welded in locking system on a keyed alike system
- CIT and Engineers can unlock and lock the system
- Internal anti hook plates
- Internal safe door bolt strap brace
- The front outer dispenser was fitted with an DACP (Dispenser Anti Cut Plate) to reduce and protect the cash opening from hooking.

Pull Out & Cutting Protection **ACW's, ACP & E-Frame**

ACW's

The ACW's have been designed to add an additional 60+ kg of weight each to the ATM. This helps especially in locations the ATM's cannot be bolted down or have poor fixings.

With 4 ACW's installed it will increase the ATM weight by over 240kg. Each ACW is fabricated by our ATM SAFE team and filled with our composite which also provides great protection against grinder/drill and Oxy attacks to the safe body.

ACW+

We now have a larger version of the standard ACW available to protect against the recent MO of using crow bars or hydraulic jacking on the leading edge of the safe door to break it open and steal the cassettes.

All ACW's are fabricated from steel by our team, filled with our composite materials with all fixings concealed by bolting the protection from the inside of the safe.

E-FRAME

The E-FRAME upgrade protects against many of the recent attacks by adding a 60mm steel and composite armoured barrier in key locations of the safe door.

This helps protect against full door cuts, Oxy attack And grinder attacks below the Cencon lock, as well as protecting the safe door and lock, it is also designed to protect re-locker locations.

Hand built and filled with our own attack resistant chemical composite mix and Steel Diamond Mesh by our ATM SAFE engineers.

CENCON ACP

The Cencon ACP has been designed as a fast deploy deterrent (no safe access required) and protection against the cutting and drill attacks below the Cencon lock.

Hand built and filled with our own attack resistant chemical composite mix and Steel Diamond Mesh by our ATM SAFE engineers.

CENCON L-ACP

The L-ACP can be used to protect more of the safe door and for larger ATM's.

We recommend adding a Pluslock inside the safe door, the ultimate relocking system for ATM's in critical attack areas.

Image shown with L-ACP and DACP

Dispenser Upgrade

Dual skin dispenser upgrade developed for the NCR 5877 POD ATM to stop easy access and crow bar attacks into the purge and top cassettes. Welded onto the safe door in the workshop. Our engineers upgrade this on a door rotation system to reduce ATM down time.

We usually install Pluslocks at the same time for ultimate safe door protection.

Specifically designed and installed on the NCR 5877 (P77) POD ATM's.

We can design bespoke solutions as requested.

Dispenser & Cash Trapping Protection

DACP, Dispenser & ATM Blocker

DACP – Dispenser Anti cut plate

The DACP is a steel fabrication welded and filled with our own attack resistant chemical composite mix, steel fillings and re-bar that is bolted from the inside of the ATM to make a secure tamper proof fixing.

The DACP is a useful long life replacement for the standard plastic cover, while also safe guarding against Oxy, drill and grinder attacks to the dispenser area of the safe door.

A common attack on these ATM's was to pry the outer plastic cover off, remove the dispenser door plate and now with the larger opening crow bar and smash down into the cassettes to steal the cash. This is another upgrade that has successfully protected and saved millions of pounds over the years.

The DACP is also a great off the shelf long life replacement for the plastic dispenser cover for the NCR 5877 or P77 POD as it's widely known.

ATM Blocker

We were approached by a US ATM deployer to design a cost effective solution that could be deployed quickly to protect ATM's from cash trapping and transaction reversal fraud attacks.

This was completed within a matter of weeks and the ATM estate was successfully protected.

Our design and innovation team are at our clients disposal to develop new solutions to protect against current and emerging threats.

Bespoke Products

From a simple drawing on a napkin we can recreate your vision in a unique way using auto-cad to design your concept to using the latest 3D printing and rendering techniques.

All designs are manufactured to the highest quality and tested thoroughly before launch.

We offer complete project management and engineer training for all our national and international partners, this can be done in house or at our head office in the UK.

- ATM Pincam
- ATFS power control
- ESP GPS tracking and alarm system
- Custom ATM Security Solutions

Investing in the right people is important for all aspects of our business, all our staff are DBS checked and vetted, holding the correct certifications. Giving our customers the peace of mind knowing that all aspects of their projects are taken care of.

Using the latest field based technology all our work is monitored so we can keep our customers informed throughout the whole journey. We are a fully approved Master Locksmiths Association member.

DELIVERY AND INSTALLATION SERVICES

ATM RECOVERIES

We offer a 7 day emergency recovery service for our clients in the UK when an ATM has suffered an attack. Our specialist engineers can open safe doors, remove the ATM to our secure storage and make site safe to the public.

SAFE REPAIRS AND UPGRADES

We can repair most ATM's after an physical attack in our workshops. Damaged safe doors and safe bodies can be welded and repaired by our fabrication team, while also being upgraded with ATM SAFE security products, Smaller damage can be repaired and protected on site after criminal activity.

ASSET RECOVERY

As part of our recovery team we often meet CIT teams, the Police and open safes so the assets can be recovered urgently and removed from further risk of theft.

INSTALLATIONS, REMOVALS AND MOVES

ATM SAFE have been providing Installation, Moves & Changes (IMAC services) to ATM companies and the financial sector for many years. Our dedicated project managers ensure we offer the highest level of customer attention and service.

SAFE LOCK SUPPLY AND INSTALLATIONS

As an approved distributor of Kaba, LA Gard and INSYS safe locks we can deliver an exceptional design, supply and installation service using our own qualified field safe engineering team.

SERVICING

Our dedicated ATM service desk ensures all works are professionally carried out by using our own security engineers for all service works, lock fits and security product installations.

Your Assets in Safe hands

THE SURE DEFENCE

Physical Security Solutions

From the world's most advanced safe deposit centres in Hong Kong, to securing cash, bullion and valuables in banks, ATM's and retailers across Europe and the Middle East; the team at Burton Security have the experience to advise, design and deliver physical security solutions to protect you and your assets.

The High Security team have over 85 years' worth of security industry experience and are qualified in security design and consultancy. Dedicated account and project managers ensure an unrivalled customer experience.

Burton Security core principle is to ensure products are tested to the highest standards. Our ATM SAFE systems have a proven track record when meeting those standards.

We are proud to have tested products to LPCB standards and feature in RedBookLive.

Burton Security delivers
The Sure Defence

Reactive Safe Engineer and Locksmith Service

Burton Security believe in offering exceptional service

Every customer has individual service needs; the internal service team design and deliver bespoke service packages to suit your individual requirements for both safe and locksmith engineering, all of which is supported by a dedicated Account Manager.

The service team is available 24/7 - 365 days a year. Skilled and experienced engineers are located across the UK and ROI, delivering market leading response and first time fix rates - providing you with reduced downtime and cost reductions.

Our business is built on delivering it!

Burton Security service agreements cover all types of safe and lock, some of the features include;

- Supply and installation of physical security products
- Emergency reactive response
- Emergency safe and door opening
- Lock upgrades and re-programming
- Preventative maintenance
- Safe removal and disposal
- Cover for all brands of locks and safe
- Dedicated Account Manager
- A single point of contact for all issues
- Free access to our in house technical help desk
- Average response times of under 3 hours
- Average time on site of less than 1 hour
- Average first time fix rate of 97%
- European cover also available

BESPOKE SECURITY SOLUTIONS

Contact our commercial team
+44 (0) 1484 663388
enquiries@burtonsecurity.com

Although Burton Security offers an extensive range of tested and certified safes, vaults and physical security products, our R&D and engineering

side of the business have the capability to provide made to measure bespoke security solutions to meet the most demanding of projects.

STANDARDS

The Sure Defence

All strongrooms certified to EN1143 must have a certified lock that reflects the grade of the solution

- Strongrooms certified to EN1143-1 Grade XI and XII must have 3 locks certified to Class C or 2 locks certified to Class D
- Strongrooms certified to EN1143-1 Grade XIII must have 2 locks certified to Class D

The standards below can be found in our Sure Defence ranges:

LPS1175 - This is an independent standard published by BRE. It can be applied to products used to form all layers of physical security, including the perimeter (e.g. fences and gates), building fabric (e.g. doors, windows, shutters and walling), enclosures and cabinets. Issue 8 defines eight levels of threat (A to H) and six levels of delay (1, 3, 5, 10, 15 and 20 minutes).

EN1627 - This is a European burglary attack test standard for security doors. There are 6 security levels from RC1 - RC6

EN1063 - This is a bullet resistance test for glass. There are 7 levels from BR1 - BR7

EN1522 - This is a bullet resistance test for doors and systems. There are 7 levels from FB1 - FB7. All parts of the door are tested, including door furniture, frames and joints

LPCB EXPLAINED

LPCB certification is recognised by insurers, consultants, architects and risk managers across the globe.

Products that are tested to LPCB standards can reduce liability for our customers because of the demonstrated due diligence that having a product certified provides.

Products are rigorously assessed in order to achieve certification. Testing and evaluation makes up an early part of the process, followed by auditing the factory production to ensure high standards are maintained.

Once the product is successfully certified, it is then listed on [RedBookLive](#). It is here that our products are seen by specifiers to verify the status of our tested products.

Once a product has been certified, continuous audits are carried out to ensure that certification is maintained.
